## **Sorting Things Out Classification And Its Consequences:**

Sorting Things Out Geoffrey C. Bowker, Susan Leigh Star, 2000-08-25 A revealing and surprising look at how classification systems can shape both worldviews and social interactions What do a seventeenth century mortality table whose causes of death include fainted in a bath frightened and itch the identification of South Africans during apartheid as European Asian colored or black and the separation of machine from hand washables have in common All are examples of classification the scaffolding of information infrastructures In Sorting Things Out Geoffrey C Bowker and Susan Leigh Star explore the role of categories and standards in shaping the modern world In a clear and lively style they investigate a variety of classification systems including the International Classification of Diseases the Nursing Interventions Classification race classification under apartheid in South Africa and the classification of viruses and of tuberculosis The authors emphasize the role of invisibility in the process by which classification orders human interaction They examine how categories are made and kept invisible and how people can change this invisibility when necessary They also explore systems of classification as part of the built information environment Much as an urban historian would review highway permits and zoning decisions to tell a city's story the authors review archives of classification design to understand how decisions have been made Sorting Things Out has a moral agenda for each standard and category valorizes some point of view and silences another Standards and classifications produce advantage or suffering Jobs are made and lost some regions benefit at the expense of others How these choices are made and how we think about that process are at the moral and political core of this work The book is an important empirical source for understanding the building of information infrastructures

**International Handbook of Internet Research** Jeremy Hunsinger, Lisbeth Klastrup, Matthew Allen, 2010-06-17 Internet research spans many disciplines From the computer or information sciences through engineering and to social sciences humanities and the arts almost all of our disciplines have made contributions to internet research whether in the effort to understand the effect of the internet on their area of study or to investigate the social and political changes related to the internet or to design and develop software and hardware for the network The possibility and extent of contributions of internet research vary across disciplines as do the purposes methods and outcomes Even the epistemological underpinnings differ widely The internet then does not have a discipline of study for itself It is a field for research Baym 2005 an open environment that simultaneously supports many approaches and techniques not otherwise commensurable with each other There are of course some inhibitions that limit explorations in this field research ethics disciplinary conventions local and national norms customs laws borders and so on Yet these limits on the internet as a field for research have not prevented the rapid expansion and exploration of the internet After nearly two decades of research and scholarship the limits are a positive contribution providing bases for discussion and interrogation of the contexts of our research making internet research better for all These limits challenges that constrain the theoretically limitless space for internet research create boundaries that give definition to the field and provide us with a

particular topography that enables research and investigation

**Introduction to Cataloging and Classification** Daniel N. Joudrey, Arlene G. Taylor, David P. Miller, 2015-09-29 A new edition of this best selling textbook reintroduces the topic of library cataloging from a fresh modern perspective Not many books merit an eleventh edition but this popular text does Newly updated Introduction to Cataloging and Classification provides an introduction to descriptive cataloging based on contemporary standards explaining the basic tenets to readers without previous experience as well as to those who merely want a better understanding of the process as it exists today The text opens with the foundations of cataloging then moves to specific details and subject matter such as Functional Requirements for Bibliographic Records FRBR Functional Requirements for Authority Data FRAD the International Cataloging Principles ICP and RDA Unlike other texts the book doesn't presume a close familiarity with the MARC bibliographic or authorities formats ALA's Anglo American Cataloging Rules 2nd Edition revised AACR2R or the International Standard Bibliographic Description ISBD Subject access to library materials is covered in sufficient depth to make the reader comfortable with the principles and practices of subject cataloging and classification In addition the book introduces MARC BIBFRAME and other approaches used to communicate and display bibliographic data Discussions of formatting presentation and administrative issues complete the book questions useful for review and study appear at the end of each chapter

*Standardization in the Middle Ages* Line Cecilie Engh, Svein Harald Gullbekk, Hans Jacob Orning, 2024-08-19 We live in a world riven through with standards To understand more of their deep rich past is to understand ourselves better The two volumes Standardization in the Middle Ages Volume 1 The North and Standardization in the Middle Ages Volume 2 Europe turn to the Middle Ages to give a deeper understanding of the medieval ideas and practices that produced and were produced by standards and standardization At first glance the Middle Ages might appear an unlikely place to look for standardization The editors argue that on the contrary generating predictability is a precondition for meaningful cultural interaction in any historical period and that we may look to the Middle Ages to learn more about the historical social and cognitive processes of standardization This multidisciplinary venture which includes medievalists from the fields of history intellectual history art history philology numismatics and more as well as scholars of cognitive science informatics and anthropology interrogates how medieval people and groups envisioned and enforced predictability uniformity and order and how they attempted to obtain and maintain standards across vast distances and heterogeneous social and cultural structures

**Classical Genetic Research and its Legacy** Jean-Paul Gaudillière, Hans-Jörg Rheinberger, 2004-10-07 With the rise of genomics the life sciences have entered a new era This book provides a comprehensive history of mapping procedures as they were developed in classical genetics An accompanying volume From Molecular Genetics to Genomics covers the history of molecular genetics and genomics The book shows that

the technology of genetic mapping is by no means a recent acquisition of molecular genetics or even genetic engineering. It demonstrates that the development of mapping technologies has accompanied the rise of modern genetics from its very beginnings. In Section One Mendelian genetics is set in perspective from the viewpoint of the detection and description of linkage phenomena. Section Two addresses the role of mapping for the experimental working practice of classical geneticists, their social interactions, and for the laboratory life worlds. With detailed analyses of the scientific practices of mapping and its illustration of the diversity of mapping practices, this book is a significant contribution to the history of genetics. A companion volume from the same editors, *From Molecular Genetics to Genomics: The Mapping Cultures of Twentieth Century Genetics*, covers the history of molecular genetics and genomics.

Neither use nor ornament Tracey Potts, 2024-06-18. *Neither use nor ornament* is a book about personal productivity narrated from the perspective of its obstacles: clutter and procrastination. It offers a challenge to the self-help promise of a clutter-free life lived in a permanent state of efficiency and flow. The book reveals how contemporary projections of the good productive life rely on images of failure. Riffing on the aphorism "less is more," a dominant refrain in present-day productivity advice, it tells stories about streamlining, efficiency, and tidiness over a time period of around 100 years. By focusing on the shadows of productivity advice, *Neither use nor ornament* seeks to unravel the moral narratives that hold individuals to account for their inefficiencies and muddles.

**Institutions of Reading** Thomas Augst, Kenneth E. Carpenter, 2007. Tracing the evolution of the library as a modern institution from the late eighteenth century to the digital era, this book explores the diverse practices by which Americans have shared reading matter for instruction, edification, and pleasure. Writing from a rich variety of perspectives, the contributors raise important questions about the material forms and social shapes of American culture: What is a library? How have libraries fostered communities of readers and influenced the practice of reading in particular communities? How did the development of modern libraries alter the boundaries of individual and social experience and define new kinds of public culture? To what extent have libraries served as commercial enterprises?
