Transputing Numerical Neural:

Transputing in Numerical and Neural Network Applications Gerard Louis Reijns, Jian Luo, 1992 An examination of the use of transputers in numerical computing and neural networks Topics covered include linear systems of equations and programming fluid and molecular dynamics simulation transformations Kalman filtering and general numerical problems Neural networks are discussed in terms of algorithms and simulation *Transputing '91* Peter Welch, Toshiyasu L. Kunii, A. Bakkers, 1991 Transputers constitute a revolutionary category of microprocessors for parallel processing which have become market leaders in 32 bit RISC architectures The wide range of applications has caused a multitude of activities of user groups in all major countries as well as regional activities on four continents For the first time the collaboration of all these user groups has led to the organization of a world conference Transputing 91 **Transputer Applications and Systems '94** A. De Gloria, M. R. Jane, D. Marini, 1994 Proceedings Parallel Computing *Transputer Research and Applications*, 2 John A. Board, 1990 **Transputer Applications and Systems '93** Reinhard Grebe, 1993 Proceedings Parallel Computing **Networks, Routers and Transputers** M. D. May, P. W. Thompson, P. H. Welch, 1993 Computer Systems Organization Computer System Implementation Occam and the Transputers, Current Developments World Occam and Transputer User Group. Technical Meeting, 1991 Examines applications of transputers and OCCAM including numerical image processing neural networks natural language processing networks and biological systems as well as tools routing and mapping The T9000 new generation transputer introduction is further discussed **Transputer and Occam Developments** World Occam and Transputer User Group. Technical Meeting, 1995 **Correct Models of Parallel Computing** S. Noguchi, Masahiro Ōta, 1997 Communicating Process Architectures 2004 Ian East, J. Martin, P.H. Welch, 2004 Communicating Process Architecture CPA describes an approach to system development that is process oriented It makes no great distinction between hardware and software It has a major root in the theory of Communicating Sequential Processes CSP However the underlying theory is not limited to CSP The importance of mobility of both channel and process within a network sees integration with ideas from the calculus Other formalisms are also exploited such as BSP and MPI The focus is on sound methods for the engineering of significant concurrent systems including those that are distributed across the Internet or within a single chip and or software scheduled on a single execution unit Traditionally at CPA the emphasis has been on theory and practice developing and applying tools based upon CSP and related theories to build high integrity systems of significant size In particular interest focuses on achieving scalability and security against error The development of Java C and C libraries to facilitate secure concurrent programming using mainstream languages has allowed CPA to continue and proliferate This work continues in support of the engineering of distributed applications Recently there has been greater reference to theory and its more direct application to programming systems and languages In this volume the formal CSP is very well presented The papers provide a healthy mixture of the academic and commercial software and

hardware application and infrastructure which reflects the nature of the discipline *Communicating Process Architectures*
