Spatial Hearing:

Spatial Hearing Jens Blauert, 1997 The field of spatial hearing has exploded in the decade or so since Jens Blauert's classic work on acoustics was first published in English This revised edition adds a new chapter that describes developments in such areas as auditory virtual reality an important field of application that is based mainly on the physics of spatial hearing binaural technology modeling speech enhancement by binaural hearing and spatial sound field mapping The chapter also includes recent research on the precedence effect that provides clear experimental evidence that cognition plays a significant role in spatial hearing The remaining four chapters in this comprehensive reference cover auditory research procedures and psychometric methods spatial hearing with one sound source spatial hearing with multiple sound sources and in enclosed spaces and progress and trends from 1972 the first German edition to 1983 the first English edition work that includes research on the physics of the external ear and the application of signal processing theory to modeling the spatial hearing process There is an extensive bibliography of more than 900 items [Principles And Applications Of Spatial Hearing](#) Yoiti Suzuki, Douglas Brungart, Kazuhiro Iida, Denis A. Cabrera, Yukio Iwaya, Hiroaki Kato, 2011-03-11 Humans possess a remarkable ability to extract rich three dimensional information about sound environments simply by analyzing the acoustic signals they receive at their two ears Research in spatial hearing has evolved from a theoretical discipline studying the basic mechanisms of hearing to a technical discipline focused on designing and implementing increasingly sophisticated spatial auditory display systems This book contains 39 chapters representing the current state of the art in spatial audio research selected from papers presented in Sendai Japan at the First International Workshop on the Principles and Applications of Spatial Hearing [How and Why Does Spatial-Hearing Ability Differ among Listeners? What Is the Role of Learning and Multisensory Interactions?](#) Guillaume Andéol, Brian D. Simpson, Ewan A. Macpherson, 2016-08-29 Spatial hearing ability has been found to vary widely across listeners A survey of the existing auditory space perception literature suggests that three main types of factors may account for this variability physical factors e.g. acoustical characteristics related to sound localization cues perceptual factors e.g. sensory cognitive processing perceptual learning multisensory interactions and methodological factors e.g. differences in stimulus presentation methods across studies However the extent to which these and perhaps other still unidentified factors actually contribute to the observed variability in spatial hearing across individuals with normal hearing or within special populations e.g. hearing impaired listeners remains largely unknown Likewise the role of perceptual learning and multisensory interactions in the emergence of a multimodal but unified representation of auditory space is still an active topic of research A better characterization and understanding of the determinants of inter individual variability in spatial hearing and of its relationship with perceptual learning and multisensory interactions would have numerous benefits In particular it would enhance the design of rehabilitative devices and of human machine interfaces involving auditory or multimodal space perception such as virtual auditory multimodal displays in aeronautics or navigational

includes detection discrimination identification recognition and comprehension of the sound There is a complex relation between age and the perception of sound source location With the progression of age hearing loss advances This book includes some of the vital pieces of works being conducted across the world on various topics related to spatial hearing and auditory perception It will also provide interesting topics for research which interested readers can take up The book will serve as a valuable source of reference for graduate and post graduate students

Binaural and Spatial Hearing in Real and Virtual Environments Robert Gilkey, Timothy R. Anderson, 2014-02-25 The current popular and scientific interest in virtual environments has provided a new impetus for investigating binaural and spatial hearing However the many intriguing phenomena of spatial hearing have long made it an exciting area of scientific inquiry Psychophysical and physiological investigations of spatial hearing seem to be converging on common explanations of underlying mechanisms These understandings have in turn been incorporated into sophisticated yet mathematically tractable models of binaural interaction Thus binaural and spatial hearing is one of the few areas in which professionals are soon likely to find adequate physiological explanations of complex psychological phenomena that can be reasonably and usefully approximated by mathematical and physical models This volume grew out of the Conference on Binaural and Spatial Hearing a four day event held at Wright Patterson Air Force Base in response to rapid developments in binaural and spatial hearing research and technology Meant to be more than just a proceedings it presents chapters that are longer than typical proceedings papers and contain considerably more review material including extensive bibliographies in many cases Arranged into topical sections the chapters represent major thrusts in the recent literature The authors of the first chapter in each section have been encouraged to take a broad perspective and review the current state of literature Subsequent chapters in each section tend to be somewhat more narrowly focused and often emphasize the authors own work Thus each section provides overview background and current research on a particular topic This book is significant in that it reviews the important work during the past 10 to 15 years and provides greater breadth and depth than most of the previous works

Head-Related Transfer Function and Virtual Auditory Display Bosun Xie, 2013-07-01 Contains a foreword by Jens Blauert This book systematically details the basic principles and applications of head related transfer function HRTF and virtual auditory display VAD and reviews the latest developments in the field especially those from the author s own state of the art research group *Head Related Transfer Function and Virtual Auditory Display* covers binaural hearing and the basic principles experimental measurements computation physical characteristics analyses filter design and customization of HRTFs It also details the principles and applications of VADs including headphone and loudspeaker based binaural reproduction virtual reproduction of stereophonic and multi channel surround sound binaural room simulation rendering systems for dynamic and real time virtual auditory environments psychoacoustic evaluation and validation of VADs and a variety of applications of VADs This guide provides all the necessary knowledge and latest results for researchers graduate students and engineers who work in

the field of HRTF and VAD *The Impact of Sensory, Linguistic and Social Deprivation on Cognition* Matthew Dye, Olivier Pascalis, 2017-12-21 Early experience plays a crucial role in determining the trajectory of cognitive development For example early sensory deprivation is known to induce neural reorganization by way of adaptation to the altered sensory experience Neville and Bavelier's compensatory theory hypothesizes that loss of one sense may bring about a sensory enhancement in the remaining modalities Sensory deprivation will however also impact the age of emergence or the speed of acquisition of cognitive abilities that depend upon sensory inputs Understanding how a child's early environment shapes their cognition is not only of theoretical interest It is essential for the development of early intervention programs that address not just the early deprivation itself but also the cognitive sequelae of such deprivation The articles in this e book all address different aspects of deprivation sensory linguistic and social and explore the impacts of such deprivation on a wide range of cognitive outcomes In reading these contributions it is important to note that sensory linguistic and social deprivation are not independent factors in human experience For example a child born deaf into a hearing family is likely to experience delays in exposure to natural language with subsequent limits on their linguistic competence having an effect on social interactions and inclusion a child raised in environments where social interaction is highly limited is also likely to experience reductions in the quantity and quality of linguistic inputs Future work will need to carefully examine the complex interactions between the sensory linguistic and social environments of children raised in atypical or impoverished environments [The Routledge Companion to the Sound of Space](#) Emma-Kate Matthews, Jane Burry, Mark Burry, 2024-11-11 This companion explores a range of conceptual and practical relationships between sound and space across various disciplines providing insights from technical creative cultural political philosophical psychological and physiological perspectives The content spans a wide range of spatial typologies from large reverberant buildings to modest and intimate ones from external public squares to domestic interiors and from naturally formed environments to highly engineered spaces These compiled insights and observations explore the vast diversity of ways in which sonic and spatial realms interact This publication therefore forms important bridges between the intricate and diverse topics of technology philosophy composition performance and spatial design to contemplate the potential of sound and space as tools for creative expression and communication as well as for technical innovation It is hoped that by sharing these insights this book will inspire practitioners scholars and enthusiasts to incorporate new perspectives and methodologies into their own work Through a rich blend of theory practice and critical reflection this volume serves as a valuable resource for anyone interested in exploring the intricacy of relationships between space and sound whether they are students professionals or simply curious Our companion provides a cross section through shared territories between sonic and spatial disciplines from architecture engineering sound design music composition and performance urban design product design and much more [Communication Acoustics](#) Ville Pulkki, Matti Karjalainen, 2015-01-27 In communication acoustics the communication channel consists of a sound source a channel

acoustic and or electric and finally the receiver the human auditory system a complex and intricate system that shapes the way sound is heard Thus when developing techniques in communication acoustics such as in speech audio and aided hearing it is important to understand the time frequency space resolution of hearing This book facilitates the reader s understanding and development of speech and audio techniques based on our knowledge of the auditory perceptual mechanisms by introducing the physical signal processing and psychophysical background to communication acoustics It then provides a detailed explanation of sound technologies where a human listener is involved including audio and speech techniques sound quality measurement hearing aids and audiology Key features Explains perceptually based audio the authors take a detailed but accessible engineering perspective on sound and hearing with a focus on the human place in the audio communications signal chain from psychoacoustics and audiology to optimizing digital signal processing for human listening Presents a wide overview of speech from the human production of speech sounds and basics of phonetics to major speech technologies recognition and synthesis of speech and methods for speech quality evaluation Includes MATLAB examples that serve as an excellent basis for the reader s own investigations into communication acoustics interaction schemes which intuitively combine touch vision and voice for lifelike interactions
