Mathematical Programming The State of the Art A. Bachem, M. Grötschel, B. Korte, 2012-12-06 In the late forties Mathematical Programming became a scientific discipline in its own right Since then it has experienced a tremendous growth Beginning with economic and military applications it is now among the most important fields of applied mathematics with extensive use in engineering natural sciences economics and biological sciences The lively activity in this area is demonstrated by the fact that as early as 1949 the first Symposium on Mathematical Programming took place in Chicago Since then mathematical programmers from all over the world have gathered at the international symposia of the Mathematical Programming Society roughly every three years to present their recent research to exchange ideas with their colleagues and to learn about the latest developments in their own and related fields In 1982 the XI International Symposium on Mathematical Programming was held at the University of Bonn W Germany from August 23 to 27 It was organized by the Institut für Ökonometrie und Operations Research of the University of Bonn in collaboration with the Sonderforschungsbereich 21 of the Deutsche Forschungsgemeinschaft This volume constitutes part of the outgrowth of this symposium and documents its scientific activities Part I of the book contains information about the symposium welcoming addresses lists of committees and sponsors and a brief review about the Fulerson Prize and the Dantzig Prize which were awarded during the opening ceremony

Designs and Graphs C.J. Colbourn, D. Jungnickel, A. Rosa, 2016-06-06 In 1988 the news of Egmont Kehler's untimely death at the age of 55 reached his friends and colleagues It was widely felt that a lasting memorial tribute should be organized The result is the present volume containing forty two articles mostly in combinatorial design theory and graph theory and all in memory of Egmont Kehler Designs and graphs were his areas of particular interest he will long be remembered for his research on cyclic designs Skolem sequences t designs and the Oberwolfach problem Professors Lenz and Ringel give a detailed appreciation of Kehler's research in the first article of this volume There is however one aspect of Egmont Kehler's biography that merits special attention Before taking up the study of mathematics at the age of 31 he had completed training as a musician studying both composition and violoncello at the Musikhochschule in Berlin and worked as a cellist in a symphony orchestra for some years This accounts for his interest in the combinatorial aspects of music His work and lectures in this direction had begun to attract the interest of many musicians and he had commenced work on a book on mathematical aspects of musical theory It is tragic indeed that his early death prevented the completion of his work the surviving paper on the classification and complexity of chords indicates the loss that his death meant to the area as he was almost uniquely qualified to bring mathematics and music together being a professional in both fields

Sports Leagues Scheduling Dirk Briskorn, 2008-01-08 In the context of sports leagues scheduling SLS several groups interests must be taken into account This book treats requirements for sport leagues schedules to be realizable from an operational and a security
