Human Agency in a Digital World Marcus Fontoura, 2025-12-23 This may be the first true AI era self help book not because we need help using technology but because we need help using it well It s about building the knowledge and the confidence to question to evaluate to choose Because understanding how algorithms work is the first step in making sure they work for us *Human Agency in a Digital World* is a book about reclaiming our role not as passengers but as pilots in the fast moving journey of technological change Written by a computer scientist who is also a father a teacher and a lifelong student of how things work this book is a deeply personal and accessible guide to the systems shaping our lives and how we might shape them back We are surrounded by digital agents They suggest the next song answer our questions sort our emails recommend what to watch and often invisibly shape what we think But what do we know about them And how much power do we really have to question understand or even redirect their impact In this book Marcus Fontoura explores the hidden architectures of modern life from social media and search engines to cloud computing AI and quantum technologies uncovering both how they work and what they mean Drawing from decades of experience building the backbone of the

internet and cloud platforms he demystifies the core concepts that govern today's systems and offers readers a way to develop digital fluency without needing a computer science degree. But this is not just a book about machines. It's a book about people about how we use efficiency not just to optimize for speed or cost but to unlock creativity opportunity and well being. With examples ranging from broken playlists to protein folding and reflections that move fluidly between systems thinking and everyday life Digital Agency asks us to consider a simple but profound question what do we want technology to do for us and what will we do with it in return.

Digital World Economy. An economic perspective on industry 4.0 Anton Nikitin, 2018-10-04 Seminar paper from the year 2018 in the subject Economics Innovation economics grade 1-3 University of Wuppertal Jean Monnet Chair for European Economic Integration language English abstract The elementary technology the Internet enabled the fourth industrial revolution. It changed the way people work. The collaboration in server clouds and the so called Internet of Things allows even machines to interact. Many questions are still unsolved e.g. the key technologies or their impact on the economic growth of economics. Nowadays the transformation process is ongoing while the impact of this technological change is still unclear. The McKinsey consulting group estimates that just the internet accounts for 21 percent of the GDP growth in major economies over the past five years. Furthermore researcher mention that the share of ICT capital is often underestimated. In real terms evaluated in prices in 1995 the share of ICT was roughly twice as high because of the continuously falling prices for ICT technologies and services. Fifteen years prior the landscape internet driven companies seemed to stop the growth path after the Dotcom Crash. Before the expectations of immense productivity gains were higher than the possibilities of the technology. Also the average employee was not ready to handle the challenges of digitalization robotic and the pace of technological change. In 2017 digitalization and automatization literature provides a wide range of IT specific but also managerial specific guidance. Available economic papers referring to industry 4.0 are comparatively few. And if available then are more focused on the impact of ICT on economic growth. This paper tries to fill the gap to the point of a political economic perspective on industry 4.0. The object of interest is particularly productivity changes caused through digitalization and automatization which can be summed in the main driving forces of industry 4.0. The initial point of the investigation is the theoretical framework of the Cobb-Douglas Production Function. It will be converted in an applied model form which could be tested with the EU KLEMS database. To justify a claim of this kind growth accounting estimates are used. The traditional neoclassical methodology determines a contribution to growth from an exogenous technological change in the Solow residual estimate of total factor productivity (TFP) growth.
