The Architect Chapters In The History Of The Profession:

The Architect Spiro Kostof, 2000 The Architect traces the role of the profession across the centuries and in different cultures showing the architect both as designer and as mediator between the client and the builder **Architect; chapters in the history of the profession** S. Kostof, 1977 **The Architect : Chapters in the History of the Profession** Berkeley Spiro Kostof Professor of Architectural History University of California, 1977-01-06 How did architects get to be architects in any given period in history How were they trained How did they find their clients and communicate with them What did society think of them Spiro Kostof's The Architect a collection of essays by historians and architects explores these and other intriguing questions about the profession of architecture The first book in more than fifty years to survey the profession from its beginnings in ancient Egypt to the modern day it is the most complete synthesis to date of our knowledge of how the architect's profession developed Included are a major study of the Beaux Arts a vivid memoir by the distinguished architect Joseph Esherick and an excellent chapter on women which demonstrates how the ethic of professionalism has contributed to the exploitation of women in this as in many other professions The Architect places the current dilemma about the architect's role in society in historical perspective and offers a good overview of the development of one of the world's oldest professions

Neo-liberalism and the Architecture of the Post Professional Era Hossein Sadri, 2018-04-27 This book discusses the effects of Neo Liberal policies on the transformations of architectural and urban practices and education in the transition from the era of professionalism to post professionalism Building on previous literature in the field of contemporary theory of architecture it provides the necessary resources for the study of contemporary architecture and urban politics urban sociology local administration and urban geography Further it develops a political and critical perspective on contemporary practices of architecture and urbanism their implementation legal background political effects and social results The book will interest readers from a wide range of academic disciplines from political science to architecture and from urban studies to sociology [Engineering as a Global Profession](#) Michael Davis, 2021-09-21 While this book begins with the analysis of engineering as a profession it concentrates on a question that the last two decades seem to have made critical Is engineering one global profession like medicine or many national or regional professions like law While science and technology studies STS have increasingly taken an empirical turn much of STS research is unclear enough about the professional responsibility of engineers that STS still tends to avoid the subject leaving engineering ethics without the empirical research needed to teach it as a global profession The philosophy of technology has tended to do the same This book's intervention is to improve the way STS as well as the philosophy of technology approaches the study of engineering This is work in the philosophy of engineering and the attempt to understand engineering as a reasonable undertaking *Craft Theory and Contemporary Architecture* Grant Alford, 2025-05-28 This book offers a comprehensive exploration of craft theory in relation to contemporary architecture Craft is an old and familiar idea but the line between craft and art or craft and mere

manufacturing for example is notoriously hard to describe In architecture a similarly blurred line between the design process on the one hand and the physical making of buildings on the other lies at the center of various debates about what it means to do architecture The growth and development of craft theory in recent years suggest new insights into these architectural debates but situating the meaning of craft within architecture within today s technological landscape is a complex problem Alford responds to this challenge by collecting various narratives from craft theory and other fields and discerning among them new lenses through which to view contemporary architectural practice Episodes from this expanded view of craft in architecture go beyond predictable accounts of Ruskin and Morris to envision new models of practice new ways of engaging other building professionals and new ways for architects to understand their own labor and the nature of how and what kinds of things they themselves craft Architecture is changing and within the ongoing story of craft explored in this book are new and surprising ways to understand design and construct the built environment Written for students and scholars this book challenges and extends the legacy of craft thinking in architecture

Architectural Records Waverly B. Lowell,Tawny Ryan Nelb,2006 Architecture and design records are exciting resources for historical research and vital for documenting and maintaining the built environment Yet their temporal nature often makes them difficult to preserve and managing collections of these records can be a challenge In addition to addressing preservation issues this resource helps archivists curators librarians and researchers understand how to assess the value of architectural records Publisher s description

Philosophy and Engineering: An Emerging Agenda Ibo van de Poel,David E. Goldberg,2010-03-11 Whereas science technology and medicine have all called forth dedicated philosophical investigations a fourth major contributor to the technoscientific world in which we all live that is engineering has been accorded almost none of the philosophical attention it deserves This volume thus offers a first characterisation of this important new field by some of the primary philosophers and ethicists interested in engineering and leading engineers interested in philosophical reflections The volume deals with such questions as What is engineering In what respect does engineering differ from science What ethical problems does engineering raise By what ethical principles are engineers guided How do engineers themselves conceive of their profession What do they see as the main philosophical challenges confronting them in the 21st century The authors respond to these and other questions from philosophical and engineering view points and so illustrate how together they can meet the challenges and realize the opportunities present in the necessary encounters between philosophy and engineering encounters that are ever more important in an increasingly engineered world and its problematic futures
