**Understanding Technological Change** Richard G. Lipsey, 2001      **Understanding Technological Change** Chris DeBresson, 1987      *Understanding Technological Innovation* Patrice Flichy, 2008-01-01

Researchers and students in the management of innovation will find in this book an analytical framework that articulates technological innovation processes and the creation of new markets. The multiplication of examples and cases helps the reader in better grasping the different aspects of the proposed framework. The focus on information and communication technologies is of high relevance; it enables the reader to put present developments in perspective and this is especially relevant when discussing ascending innovation and the role of users and uses.

Philippe Laredo, Universities of Paris Est and Manchester, Coordinator of the European PRIME Network of Excellence. Patrice Flichy takes the reader on a fascinating tour of the literature on technological innovation. Innovation is situated within the frames of functioning and use, offering rich insights into the strategies, tactics, improvisations and learning which occur through time. He emphasises the dreams and musings of inventors, novelists and the popular media to show how they mediate new technological frames of reference. This book offers an excellent synthesis of the literature and an original historical account of innovation with special reference to information and communication technologies.

Robin Mansell, London School of Economics and Political Science, UK. In *Understanding Technological Innovation*, Patrice Flichy's interest is in the genesis of technology. He describes the perspectives and interpretive schemes deployed by historians, sociologists and economists in attempts to understand the determinants, including chance, of the particular forms of products and systems that have come to dominate the market and play so important a role, some would claim dominant, in our lives. It is rare to find in one volume so informed a critique of the essential writings of historians, of technology, contemporary sociologists and economic historians. His own special interest lies in the development of information technology and he puts his expertise to good use in revealing and contrasting the different perspectives and claims of these three schools.

Louis L. Bucciarelli, Massachusetts Institute of Technology, US. Working at the interface between interactionist sociology, history and economics, Flichy provides us with a language for charting the evolution of new technologies as generic technical capabilities are explored, perhaps inspired by visions of societal change and become stabilised and attached to particular conceptions of use. He offers us an integrated perspective on technological innovation, addressing the influence of history and social context whilst remaining open to the often unanticipated dynamism and surprises that may surround both these trajectories. This book will provide a thoughtful contribution to current debates. The critical literature review will provide a rich and convenient source for advanced teaching and research training.

Robin Williams, The University of Edinburgh, UK. How do the social sciences address the question of innovation and the relationship between technology and use? This is the core point of this book, which examines critically diverse works in sociology, history, economics and anthropology in order to formulate a new approach. This reflection is essentially of a general nature, though the cases used to illustrate the analysis are drawn primarily

from the field of ICT Patrice Flichy studies how the socio technological actions of the different actors particularly designers and users are organized within the same frames of reference He also introduces a new element into the model by demonstrating how time is involved in technological choices Understanding Technological Innovation will be essential reading for advanced teaching and research training in the fields of science and technology studies and media and communication studies

Girifalco,1991-05-31 Technology is not an end in itself but a way of satisfying human wants It shows us how to solve the age old economic problem of surviving and prospering in a hard world But to optimize the benefits of technological advance requires an understanding of how it happens The purpose of this book is to provide some of that understanding The subject is so enormous and so intertwined with every human activity that a small selection of it and that from a special viewpoint is inevitable The selection of subject matter has been of course conditioned by what interests me and is somewhat heterogeneous However it is connected by two major themes The first is that it emphasizes the dynamic nature of technology in the sense that it must be approached as a process evolving in time that can often be described in quantitative terms The second is that I have chosen topics that I believe are essential for a strategic sense of how to plan for execute and respond to technological change These two themes complement each other because the strategic sense requires an appreciation of the dynamics and the dynamics naturally lead to a consideration of how to deal with technology so that it can be used to achieve human objectives The unifying thought behind the book is that technological change has a systemic as well as an idiosyncratic aspect
