## **Surface Processes And Landforms:**

Surface Processes and Landforms Don J. Easterbrook, 1999 This book includes both basic material for students without a great deal of background in geology as well as more advanced topics With coverage that reaches beyond the study of surface processes it contains discussions on the evolution of landforms and interpretation of their origin The Second Edition reflects the increasing relevance of geomorphology to environmental concerns and the additional emphasis this has placed on more applied aspects of the field Also considered is the revolution of the discipline brought on by many rapidly evolving tools such as computers sophisticated electronic measuring devices lasers mass spectrometers new methods of dating landforms and deposits and others

J. Kirkby,1994-03-08 Multinational contributors present articles on a wide range of themes but with important convergences of interest on critical topics A group of papers on tectonic and general approaches reviews the role of randomness in process models and provides a novel theoretical analysis of the relationships between tectonic and erosional forces Selections on channel processes reflect current interest in gravel bed rivers related to their widespread occurrence in mountain areas and in braided systems Articles on valley heads bring together views from several sometimes conflicting research approaches The final group of contributions illustrate the range of problems to which theoretical methods in geomorphology can now be applied *Earth Surface Processes and Landforms* Jack Hardisty,1994 Investigating Connectivity to Advance the Predictive Understanding of Watershed Processes and the Earth's Critical Zone Dipankar Dwivedi,Ronald Erwin Pöppel,Ellen Wohl,2025-05-15 Connectivity implies the pathways that link organisms energy and matter across different compartments of the Earth s critical zone it also refers to the links that key processes have to deep hydrological flow paths and atmospheric circulation systems Although connectivity has been long investigated in geomorphology the usage of connectivity in other cognate disciplines such as hydrology biogeochemistry and watershed science has occurred only recently A major driver for the development of a broader definition and investigation came from the Geomorphology Symposium organized around the connectivity theme in 2015 <https://www.binghamtongeomorph.com> Six key themes from the symposium included sediment connectivity hydrologic connectivity geochemical connectivity riverine connectivity landscape connectivity and connectivity modeling Since the Geomorphology Symposium in 2015 significant progress has been achieved in understanding the evolution of connectivity and the quantification of various aspects of connectivity and its thresholds However several opportunities still exist for unlocking the full potential of a broad consideration of connectivity and thereby advancing the predictive understanding of watershed processes at multiple scales and the Earth s critical zone Here we invite theoretical and data driven contributions that can contribute using connectivity constructs Topics of interest include but are not limited to 1 Elucidation of the current state of knowledge regarding the concept of connectivity vis vis six themes mentioned above in watershed sciences and the Earth s critical zone and its underlying theoretical assumptions 2 New approaches including machine learning and artificial intelligence that make use of a spectrum of data sources to quantify connectivity and the interactions between different types of connectivity 3 Novel frameworks making use of the broad concepts of connectivity in watershed and reactive transport models to understand hydrobiogeochemical dynamics and predict transient export of water nitrogen carbon and metals 4 Frameworks to quantify uncertainty and address inherent data challenges for diverse connectivity aspects collapse
