Starting a Process:

- **Foreground Processes:**

- By default, every process that you start runs in the foreground. It gets its input from the keyboard and sends its output to the screen.

- **Background Processes:**

- A background process runs without being connected to your keyboard. If the background process requires any keyboard input, it waits.
- The advantage of running a process in the background is that you can run other commands; you do not have to wait until it completes to start another!
