Weitzenfeld, Changjiu Zhou, 2009-06-24 The 12th annual RoboCup International Symposium was held during July 15-18, 2008 in conjunction with RoboCup 2008 Competitions and Demonstrations. The symposium represents the core meeting for the presentation and discussion of scientific contributions in diverse areas related to the main threads within RoboCup Soccer, RoboCup Rescue, RoboCup Home, and RoboCup Junior. Its scope encompassed but was not restricted to research and education activities within the fields of artificial intelligence and robotics. A fundamental aspect of RoboCup is promoting science and technology among young students and researchers in addition to providing a forum for discussion and excitement about Robotics with practitioners from all over the world. Since its first edition in 1997 in Nagoya, the RoboCup Competitions and Symposium have attracted an increasing number of researchers and students from all the world and today it is a major event in robotics worldwide. Due to its interdisciplinary nature and the exploration of various and intimate connections of theory and practice across a wide spectrum of different fields, the symposium offered an excellent opportunity to introduce new techniques to various scientific disciplines. The experimental, interactive, and benchmark character of the RoboCup initiative created the opportunity to present, learn, and evaluate novel ideas and approaches with significant potential. If promising, they are then rapidly adopted and field tested by a large and still strongly growing community.

Intelligent Autonomous Robotics Peter Stone, 2022-05-31 Robotics technology has recently advanced to the point of being widely accessible for relatively low budget research as well as for graduate, undergraduate, and even secondary and primary school education. This lecture provides an example of how to productively use a cutting edge advanced robotics platform for education and research by providing a detailed case study with the Sony AIBO robot, a vision-based legged robot. The case study used for this lecture is the UT Austin Villa RoboCup Four Legged Team. This lecture describes both the development process and the technical details of its end result. The main contributions of this lecture are: i) a roadmap for new classes and research groups interested in intelligent autonomous robotics who are starting from scratch with a new robot, and ii) documentation of the algorithms behind our own approach on the AIBOs with the goal of making them accessible for use on other vision-based and/or legged robot platforms.
