Low-carbon Technology Transfer David G. Ockwell, Alexandra Mallett, 2012-12-12 Low carbon technology transfer to developing countries has been both a lynchpin of and a key stumbling block to a global deal on climate change This book brings together for the first time in one place the work of some of the world's leading contemporary researchers in this field It provides a practical empirically grounded guide for policy makers and practitioners while at the same time making new theoretical advances in combining insights from the literature on technology transfer and the literature on low carbon innovation The book begins by summarizing the nature of low carbon

technology transfer and its contemporary relevance in the context of climate change before introducing a new theoretical framework through which effective policy mechanisms can be analyzed The north south developed developing country differences and synergies are then introduced together with the relevant international policy context Uniquely the book also introduces questions around the extent to which current approaches to technology transfer under the international policy regime might be considered to be pro poor Throughout the book draws on cutting edge empirical work to illustrate the insights it affords The book concludes by setting out constructive ways forward towards delivering on existing international commitments in this area including practical tools for decision makers *Technology Transfer* Gene Aloise,2010-03 The Dept of Energy DoE spends billions of dollars each year at its national labs on advanced science energy and other research Federal laws and policies have encouraged the transfer of federally developed technologies to private firms universities and others to use or commercialize The Amer Recovery and Reinvestment Act of 2009 further emphasized the role of such technologies for addressing the nation s energy economic and other challenges This report examined 1 the nature and extent of technology transfer at DoE s labs 2 the extent to which DoE can measure the effectiveness of its technology transfer efforts and 3 factors affecting and approaches for improving DoE s efforts Charts and tables [Technology Transfer Programs and Competitiveness in the Global Marketplace](#) United States. despite the fact that energy related goods account for more than ten percent of international trade policy makers academics and the business community perceive barriers to the global diffusion of these emerging technologies Experts point to problems including intellectual property concerns trade barriers and developing countries limited access to technology and funding In this book Kelly Gallagher uses analysis and case studies from China s solar photovoltaic gas turbine advanced battery and coal gasification industries to examine both barriers and incentives in clean energy technology transfer Gallagher finds that the barriers are not as daunting as many assume these technologies already cross borders through foreign direct investment licensing joint R she proposes a new model of global technology diffusion that casts doubt on aspects of technology transfer theory

Technological revolutions have increased the world s wealth unevenly and in ways that have accelerated climate change This report argues that achieving The Paris Agreement s objectives would require a massive transfer of existing and commercially proven low carbon technologies LCT from high income to developing countries where the bulk of future emissions is expected to occur This mass deployment is not only a necessity but also an opportunity Policies to deploy LCT can help countries achieve economic and other development objectives like improving human health in addition to reducing greenhouse gases GHGs Additionally LCT deployment offers an opportunity for countries with sufficient capabilities to benefit from participation in global value chains and produce and export LCTs Finally the report calls for a greater international involvement in supporting the poorest countries which have the least access to LCT and finance and the most underdeveloped physical technological and institutional capabilities that are essential to benefit from technology
