Zoubek **Regional Engineering Geology of Czechoslovak Carpathians** Milan Matula, 1969 Landscapes and Landforms of the Czech Republic Tomáš Pánek, Jan Hradecký, 2016-03-08 The book aims to present the unique geomorphological landscapes of the Czech Republic. The geomorphic uniqueness of this country benefits from the proximity to two distinct European geological domains: the old cratonized Bohemian Massif and the relatively young Tertiary fold and thrust belt of the Western Carpathians. Landscapes and Landforms of the Czech Republic introduces general physiographical characteristics of the landscape and presents the main driving factors leading to the evolution of the present landscape. The book contains twenty-two chapters describing the most interesting geomorphic landscapes of the Czech Republic. The selection of individual landscapes was based on visual exceptionalities, e.g. sandstone landscapes of the Northern Bohemia, scientific importance, e.g. patterned grounds in the Sudetic Mountains, and historical relevance, e.g. mining of the N. and Hrubý Jeseník Mountains. The final chapters of the book discuss the protection of geomorphic heritage in the Czech Republic. **The Variscan Orogen of Central Europe** Ulf Linnemann, 2025-08-27 The book is written by an international team of specialized geoscientists and represents the current knowledge of the evolution of the Variscan Orogen in Central Europe. After a preface, the geotectonic position of the mountain belt within the supercontinent Pangea and the zoning of the orogen is described. Chapter 1: The birth of the Central European Variscides and the role of the Avalonian and Cadomian orogenic processes as forerunners of the Central European Variscides is presented also in Chapter 1. The big building blocks of the Variscan orogen north and south of the Rheic suture are lined out in detail in the main part of the book. Chapters 2 to 18: After the description of the igneous

activity in Permo Carboniferous time Chapter 19 neotectonic reactivation Chapter 20 current models for Variscan orogenic processes Chapter 21 and the zircon data base Chapter 22 are briefly characterized A final major section Chapters 23 to 29 includes geobiological palaeontological and palaeoenvironmental data including event stratigraphy relevant for Variscan plate tectonics The book is written for an international readership of professional geoscientists of students of natural sciences and of people interested in the formation and geology of Central Europe *Regional Geology of Czechoslovakia: The Bohemian Massif*, by J.
