Beginning with the introduction of the telegraph and continuing through to current developments in wireless and online services, authors Christopher H. Sterling, Phyllis W. Bernt, and Martin B. H. Weiss explain each stage of telecommunications development, examining the interplay among technical innovation, policy decisions, and regulatory developments. Offering an integrated treatment of the interplay among technology, policy, and economics as key factors defining the development of the telecommunications sector in the United States, this volume also provides background material to facilitate understanding of each sector's context for many so-called new issues, problems, and trends, demonstrating origins from years or decades in the past and careful annotation, documentation, and reference tables to enable further research on the topics discussed. As such, it is essential reading for advanced students in telecommunications, needing to understand how the telecommunications industry and service developed to its current form.
