Telling Lives In Science:

Telling Lives in Science Michael Shortland, Richard R. Yeo, 1996-06-27 Collects together original essays by leading historians of science on the nature and development of scientific biography *Biographies in the History of Physics*

Christian Forstner, Mark Walker, 2020-07-22 This book sheds new light on the biographical approach in the history of physics by including the biographies of scientific objects institutions and concepts What is a biography Can biographies also be written for non human subjects like scientific instruments institutions or concepts The respective chapters of this book discuss these controversial questions using examples from the history of physics By approaching biography as metaphor it transcends the boundaries between various perspectives on the history of physics and enriches our grasp of the past **The History and Poetics of Scientific Biography** Thomas Söderqvist, 2016-03-03 Biographies of scientists carry an increasingly prominent role in today's publishing climate Traditional historical and sociological accounts of science are complemented by narratives that emphasize the importance of the scientific subject in the production of science Not least is the realization that the role of science in culture is much more accessible when presented through the lives of its practitioners Taken as a genre such biographies play an important role in the public understanding of science In recent years there has been an increasing number of monographs and collections about biography in general and literary biography in particular However biographies of scientists engineers and medical doctors have rarely been the topic of scholarly inquiry As such this volume of essays will be welcomed by those interested in the genre of science biography and who wish to re-examine its history foundational problems and theoretical implications Borrowing approaches and methods from cultural studies and the history philosophy and sociology of science the contributions cover a broad range of subjects periods and locations By presenting such a rich diversity of essays the volume is able to chart the reoccurring conceptual problems and devices that have influenced scientific biographies from classical antiquity to the present day In so doing it provides a compelling overview of the history of the genre suggesting that the different valuations given scientific biography over time have been largely fuelled by vested professional interests **Nationalizing Science** Alan J. Rocke, 2000-11-08 After looking at the early careers of Wurtz's two mentors Liebig and Jean Baptiste Dumas Rocke describes Wurtz's life and career in the politically complex period leading up to 1853 He then discusses the turning point in Wurtz's intellectual life his conversion to the reformed chemistry of Laurent Gerhardt and Williamson and his efforts to persuade his colleagues of the advantages of the new system In 1869 Adolphe Wurtz 1817-1884 called chemistry a French science In fact however Wurtz was the most internationalist of French chemists Born in Strasbourg and educated partly in the laboratory of the great Justus Liebig he spent his career in Paris where he devoted himself to introducing German ideas into French scientific circles His life therefore provides an excellent vehicle for considering the divergent trajectories of French and German chemistry and by extension French and German science during this crucial period After looking at the early careers of Wurtz's two mentors

Liebig and Jean Baptiste Dumas Roche describes Wurtz s life and career in the politically complex period leading up to 1853 He then discusses the turning point in Wurtz s intellectual life his conversion to the reformed chemistry of Laurent Gerhardt and Williamson and his efforts social and political as well as scientific to persuade his colleagues of the advantages of the new system He looks at political patronage or the lack thereof and at the insufficient material support from the French government during the middle decades of the century From there Roche goes on to examine the rivalry between Wurtz and Marcellin Berthelot the debate over atoms versus equivalents and the reasons for Wurtz s failure to win acceptance for his ideas The story offers insights into the changing status of science in this period and helps to explain the eventual course of both French and German chemistry [Collections Vol 13 N2](#) Juilee Decker,Collections,2017-07-06 This issue of the journal is themed with a focus on Storytelling Oral Histories Archives and Museums Articles address methods case studies and theoretical approaches taken by museum and archives professionals including librarians archivists curators technologists researchers scholars and students [Life-writing in the History of Archaeology](#) Gabriel Moshenska,Clare Lewis,2023-07-10 Life writing is a vital part of the history of archaeology and a growing field of scholarship within the discipline The lives of archaeologists are entangled with histories of museums and collections developments in science and scholarship and narratives of nationalism and colonialism into the present In recent years life writing has played an important role in the surge of new research in the history of archaeology including ground breaking studies of discipline formation institutionalisation and social and intellectual networks Sources such as diaries wills film and the growing body of digital records are powerful tools for highlighting the contributions of hitherto marginalised archaeological lives including many pioneering women hired labourers and other hidden hands This book brings together critical perspectives on life writing in the history of archaeology from leading figures in the field These include studies of archive formation and use the concept of dig writing as a distinctive genre of archaeological creativity and reviews of new sources for already well known lives Several chapters reflect on the experience of life writing review the historiography of the field and assess the intellectual value and significance of life writing as a genre Together they work to problematise underlying assumptions about this genre foregrounding methodology social theory ethics and other practice focused frameworks in conscious tension with previous practices **Recreating Newton** Rebekah Higgitt,2016-09-12 Higgitt examines Isaac Newton s changing legacy during the nineteenth century She focuses on 1820 1870 a period that saw the creation of the specialized and secularized role of the scientist At the same time researchers gained better access to Newton s archives These were used both by those who wished to undermine the traditional idealised depiction of scientific genius and those who felt obliged to defend Newtonian hagiography Higgitt shows how debates about Newton s character stimulated historical scholarship and led to the development of a new expertise in the history of science [Imagining Nations](#) Geoffrey Cubitt,1998 Revisiting divisions of labour is a reflection on the making of a modern sociological classic text and its enduring influence on the discipline and

beyond Ray Pahl's 1984 book is distinctive in the sustained impact it has had on how sociologists think about research and report on the changing nature of work and domestic life. In this timely revisiting of a landmark project excerpts from the original are interspersed with contributions from leading researchers reflecting on the book and its effects in the ensuing three decades. The book will be of interest to researchers, students and lecturers in sociology and related disciplines.

Science in the Public Sphere Richard R. Yeo, 2001. The common focus of these essays is the debate on the nature of science often referred to by contemporaries as natural knowledge in Britain during the first half of the 19th century. A study of these debates allows us to see how British science of this period began to cast loose some of its earlier theological supports but still relied on a moral framework to affirm its distinctive method, ethos and cultural value. Educating by Story-telling Katherine Dunlap Cather, 1919. **Journal of Proceedings and Addresses of the ... Annual Convention** Minnesota Educational Association, 1904. The History of Natural History Gavin D. R. Bridson, 2008. With over 5,300 added references this revised and updated edition is an essential source of information for scientists, researchers and enthusiastic amateurs. The History of Natural History is one of those key works that should be kept in easy reach of anyone interested in the study of natural history in all its branches. *Science in Denmark* Helge Kragh, 2008. Although Denmark, a small country on the European periphery, has only made a modest contribution to decisive progress in scientific research on the international arena, there have nevertheless been numerous significant Danish contributions and naturally this present work describes these high points. While the high points are represented by scientists like Tycho Brahe, H. C. Ørsted and Niels Bohr, this publication distances itself from prevailing heroic presentations by putting weight on the dependence of these scientists on a wide-ranging professional network as well as close contacts to private patrons, the state and other sponsors. Even though splendid pinnacles are also to be found, the flat landscape is perhaps more representative of Danish natural science history. In Denmark, the natural sciences, as also applies to other sciences and culture in general, have developed mainly through the reception of and adaptation to science from abroad. Reception history has therefore been given a prominent place in the work. Institutions and organisations history is another area that is given high priority, just as great weight has been laid on the material, economic and cultural framework under which research has always functioned. Although Danish natural science researchers have nearly always emphasised the importance of international cooperation, there are many national aspects of a social, political and cultural type which have had significant influence on the scientific practice in Denmark. The present work is documented in such a way that it also makes sense to write the international scientists' history in a national context and thereby placing the work solidly in a new and fast-growing scientific historic genre. *Philosophy of Science Association Newsletter* Philosophy of Science Association, 1982. **From Citizens to Subjects** Rebekah Higgitt, 2007. *From Citizens to Subjects* challenges the common assertion in historiography that Enlightenment era centralization and rationalization brought progress and prosperity to all European states, arguing instead that centralization failed to improve the socio

economic position of urban residents in the former Polish Lithuanian Commonwealth over a 100 year period Murphy examines the government of the Polish Lithuanian Commonwealth and the several imperial administrations that replaced it after the Partitions comparing and contrasting their relationships with local citizenry minority communities and nobles who enjoyed considerable autonomy in their management of the cities of present day Poland Ukraine and Belarus He shows how the failure of Enlightenment era reform was a direct result of the inherent defects in the reformers visions rather than from sabotage by shortsighted local residents Reform in Poland Lithuania effectively destroyed the existing system of complexities and imprecisions that had allowed certain towns to flourish while also fostering a culture of self government and civic republicanism among city citizens of all ranks and religions By the mid nineteenth century the increasingly immobile post Enlightenment state had transformed activist citizens into largely powerless subjects without conferring the promised material and economic benefits of centralization
