

The image is a halftone-style illustration of a human face, rendered in shades of yellow and black. The face is positioned on the left side of the frame, with its features defined by the density of the dots. A bright yellow glow emanates from the right side of the face, extending towards the center. The background is a dark, textured field of black dots, with a bright white light source in the upper right corner, creating a lens flare effect.

The Photic Field:

The Photic Field Parry Hiram Moon, Domina Eberle Spencer, 1981 The Photic Field brings a formal elegance and completeness to the portion of geometrical optics that deals with amounts of radiant energy Since the time of Lambert this discipline has been handled piecemeal by a great variety of methods But by utilizing the full potentialities of field theory the book unifies the subject and forges a powerful tool for handling practical applications Such applications include solar heating lighting design photographic exposure and color specification The pharosage vector is used throughout the book and divergence curl and gradient are employed Potentials and quasi potentials are important and contour integration allows a double integral to be replaced by a single integral These and other aspects of field theory will allow the reader to solve photometric problems that were previously difficult to formulate Many of the formulations in geometrical optics although conceptually clear are computationally unwieldy As a result researchers until quite recently have had to rely on a scattered collection of rules of thumb and approximation methods But now with the general availability of computer exact solutions are within range and thus many of the equations given in The Photic Field may be directly applied almost for the first time
