## **Vision In Vehicles Iv Vision In Vehicles Hardcover:**

**Vision in vehicles - IV**, 1993 Vision-based Vehicle Guidance Ichiro Masaki, 2012-12-06 There is a growing social interest in developing vision based vehicle guidance systems for improving traffic safety and efficiency and the environment. Examples of vision based vehicle guidance systems include collision warning systems steering control systems for tracking painted lane marks and speed control systems for preventing rear end collisions. Like other guidance systems for aircraft and trains these systems are expected to increase traffic safety significantly. For example safety improvements of aircraft landing processes after the introduction of automatic guidance systems have been reported to be 100 times better than prior to installment. Although the safety of human lives is beyond price the cost for automatic guidance could be compensated by decreased insurance costs. It is becoming more important to increase traffic safety by decreasing the human driver's load in our society especially with an increasing population of senior people who continue to drive. The second potential social benefit is the improvement of traffic efficiency by decreasing the spacing between vehicles without sacrificing safety. It is reported for example that four times the efficiency is expected if the spacing between cars is controlled automatically at 90 cm with a speed of 100 km/h compared to today's typical manual driving. Although there are a lot of technical psychological and social issues to be solved before realizing the high density high speed traffic systems described here highly efficient highways are becoming more important because of increasing traffic congestion.

**XTREME MODELLING 36**, *Vision in Vehicles IV* I.D. Brown, C.M. Haslegrave, H.W. Krusss, S.P. Taylor, 1993-02-11 This volume contains contributions illuminating much of the current research occurring in the area of visual perception. It encompasses all aspects of vision and its relationship to vehicle design including both the internal and external design of the vehicle as well as the perceptual and cognitive limitations of the vehicle controller. Issues specifically related to the vision of the driver are initially addressed and the problems of vehicle glazing and light transmission are considered. The major topics of visual perception and vehicle control are covered in three related chapters encompassing collision avoidance vehicle signalling systems and the acquisition of visual information. Moving on to the external environment and its relationship to vision traffic signs are discussed. Approaches to the measurement and modelling of driver behaviour are dealt with and the area of telebotonic control of vehicles is considered. In vehicle displays are covered in two related chapters addressing issues of visual workload and effects of display type. It is hoped that the book contributed to by experts from a diverse range of disciplines including optometrists psychologists physiologists human factors specialists and engineers will stimulate the progression of research in this area as effectively as the preceding volumes did.
