An Evaluation of the Changes in Manual Therapy Techniques in Physical Therapy Nelson Alberto Rojas, 2022 Prior research has focused on comparing the effects of manual therapy techniques used in physical therapy in different conditions to determine which technique is more effective and less invasive for the patient However no focus has been placed on identifying and evaluating the changes in manual therapy techniques This study aims to evaluate the changes in manual therapy techniques from the perspective of current and retired physical therapists who are or were licensed in Washington state Eighteen participants completed a modified Physical Therapy Profile Questionnaire PTPQ to explore their experience with manual therapy techniques and whether they implemented changes in their practice of these techniques The results suggest that changes in manual therapy techniques occur as physical therapists gain and develop more experience working with many clients and treating different conditions Joint mobilization taping and muscle energy techniques were the most used and recommended manual therapy techniques by physical therapists in this sample There was no significant correlation between the years of practice and the number of manual therapy techniques selected by participants $r = 0.044$, $p = 0.887$ This study suggests that changes and adjustments in manual therapy techniques have occurred throughout time as physical therapists gain practice in the field and can identify what manual technique will produce a better patient outcome in a specific patient

Practical Guide on Krishna's Kinetikinetic Manual Therapy Krishna Sharma, Chakshu Bansal Kathuria, 2017-09-16 The term Kinetikinetic in KKMT actually means mobilization of forces So KKMT emphasizes on reprogramming the forces rather than only mobilizing the joints Where most of the manual therapy techniques apply either unidirectional or bidirectional glides motions The KKMT school of thought believes in 3D glides rolling and motion facilitations for improving functional motions KKMT started with two simple questions 1 Why should we do two dimensional mobilizations when actually there are no pure two dimensional functional motions 2 Why do we do pure joint mobilization when there are many other factors responsible for joint homeostasis This book is rich with pictures and figures to make the learning process easier
