Computer Algebra and Symbolic Computation Joel S. Cohen,2002-07-19 This book provides a systematic approach for the algorithmic formulation and implementation of mathematical operations in computer algebra programming languages The viewpoint is that mathematical expressions represented by expression trees are the data objects of computer algebra programs and by using a few primitive operations that analyze and

Symbolic-Numeric Computation Dongming Wang,Li-Hong Zhi,2007-01-22 The growing demand of speed accuracy and reliability in scientific and engineering computing has been accelerating the merging of symbolic and numeric computations These two types of computation coexist in mathematics yet are separated in traditional research of mathematical computation This book presents 27 research articles on the integration and interaction of symbolic and numeric computation

Computer - Human Interaction in Symbolic Computation Norbert Kajler,2012-12-06 The well attended March 1994 HIse workshop in Amsterdam was a very lively conference which stimulated much discussion and human human interaction As the editor of this volume points out the Amsterdam meeting was just part of a year long project that brought many people together from many parts of the world The value of the effort was not only in generating new ideas but in making people aware of work that has gone on on many fronts in using computers to make mathematics more understandable The author was very glad he attended the workshop In thinking back over the conference and in reading the papers in this collection the author feels there are perhaps four major conclusions to be drawn from the current state of work 1 graphics is very important but such features should be made as easy to use as possible 2 symbolic mathematical computation is very powerful but the user must be able to see intermediate steps 3 system design has made much progress but for semester long coursework and book length productions we need more tools to help composition and navigation 4 monolithic systems are perhaps not the best direction for the future as different users have different needs and may have to link together many kinds of tools The editor of this volume and the authors of the papers presented here have also reached and documented similar conclusions

Holm,2005-01 Symbolic Computing covers various fundamentals of computing science in terms of purely symbolic LISP Topics include for example functions recursion sorting backtracking parsing arbitrary precision arithmetics formal semantics and scoping strategies Pure LISP is an elegant flexible and powerful mathematical system and programming language It shares a lot of properties with modern dialects of LISP such as Common Lisp and Scheme

[Mathematical Aspects of Scientific Software](#) J.R. Rice,2012-12-06 Since scientific software

is the fuel that drives today's computers to solve a vast range of problems huge efforts are being put into the development of new software systems and algorithms for scientific problem solving This book explores how scientific software impacts the structure of mathematics how it creates new subfields and how new classes of mathematical problems arise The focus is on five topics where the impact is currently being felt and where important new challenges exist namely the new subfield of parallel and geometric computations the emergence of symbolic computation systems into general use the potential emergence of new high level mathematical systems and the crucial question of how to measure the performance of mathematical problem solving tools *Official Gazette of the United States Patent and Trademark Office* ,2004

Numerical Python Robert Johansson,2015-10-07 Numerical Python by Robert Johansson shows you how to leverage the numerical and mathematical modules in Python and its Standard Library as well as popular open source numerical Python packages like NumPy FiPy matplotlib and more to numerically compute solutions and mathematically model applications in a number of areas like big data cloud computing financial engineering business management and more After reading and using this book you ll get some takeaway case study examples of applications that can be found in areas like business management big data cloud computing financial engineering i e options trading investment alternatives and even games Up until very recently Python was mostly regarded as just a web scripting language Well computational scientists and engineers have recently discovered the flexibility and power of Python to do more Big data analytics and cloud computing programmers are seeing Python's immense use Financial engineers are also now employing Python in their work Python seems to be evolving as a language that can even rival C Fortran and Pascal Delphi for numerical and mathematical computations **Python**

Scripting for Computational Science Hans Petter Langtangen,2009-01-09 With a primary focus on examples and applications of relevance to computational scientists this brilliantly useful book shows computational scientists how to develop tailored flexible and human efficient working environments built from small scripts written in the easy to learn high level Python language All the tools and examples in this book are open source codes This third edition features lots of new material It is also released after a comprehensive reorganization of the text The author has inserted improved examples and tools and updated information as well as correcting any errors that crept in to the first imprint Algebra for Symbolic

Computation Antonio Machi,2012-07-10 This book deals with several topics in algebra useful for computer science applications and the symbolic treatment of algebraic problems pointing out and discussing their algorithmic nature The topics covered range from classical results such as the Euclidean algorithm the Chinese remainder theorem and polynomial interpolation to p adic expansions of rational and algebraic numbers and rational functions to reach the problem of the polynomial factorisation especially via Berlekamp's method and the discrete Fourier transform Basic algebra concepts are revised in a form suited for implementation on a computer algebra system **Symbolic and Numerical Computation for**

Artificial Intelligence Bruce R. Donald,Deepak Kapur,Joseph L. Mundy,1992 Over the last decade there has been

considerable progress in investigating methods of symbolic mathematics in many application areas of computer science and artificial intelligence such as engineering design solid and geometric modelling robotics and motion planning and machine vision This research has produced few applications within engineering and robotics because of the combinatorial cost of symbolic techniques Therefore it is essential to investigate approaches for systematic integration of symbolic with numerical techniques which are efficient for handling the huge amount of data that arises in practical applications while at the same time maintain a logically consistent solution framework Symbolic and Numerical Computation for Artificial Intelligence gives an overview of applications in machine vision robotics and engineering design where there is a need for integrating symbolic and numerical methods It also illustrates the case for an integrated symbolic and numerical environment to support the needs of these applications This book will be essential reading for researchers in applied mathematics symbolic and algebraic manipulation and applied artificial intell

Parallel Symbolic Computing: Languages, Systems, and Applications

Robert H. Halstead, Takayasu Ito, 1993-11-03 Parallel and distributed computing are becoming increasingly important as cost effective ways to achieve high computational performance Symbolic computations are notable for their use of irregular data structures and hence parallel symbolic computing has its own distinctive set of technical challenges The papers in this book are based on presentations made at a workshop at MIT in October 1992 They present results in a wide range of areas including speculative computation scheduling techniques program development tools and environments programming languages and systems models of concurrency and distribution parallel computer architecture and symbolic applications
