**Information Technology and Industrial Competitiveness** Chris F. Kemerer, 2012-12-06 Information Technology IT the field that links computer and communications equipment and software is

transforming the way modern business is done. Examples of factors leading these changes are rapidly decreasing costs of computer hardware, government de-regulation, accelerating global competitiveness, an increasing management awareness, and the knowledge of how to employ Information Technology successfully. These have all led to the increase of IT's effects on existing markets and in the process are creating entirely new markets. This book explores a variety of advances in IT by a group of researchers who are at the cutting edge of this research. Moreover, the book examines these innovative developments in terms of the Information Technology field and its effect on modern business. It is becoming increasingly apparent that IT is critical to success in today's competitive marketplace. As a result, this book examines a host of emerging effects at work in these developments and seeks to make sense out of these counter-acting, sometimes multiplicative effects which can become obstacles for managers who wish to develop competitive applications of IT. These effects and the development of IT are grouped into four general categories in the book: Future Markets, Inter-Organizational Systems, Focused Applications, and Future Strategies.

*Perspectives on U.S. Competitiveness in Science and Technology* Titus Galama, James R. Hosek, 2007. Is the United States in danger of losing its competitive edge in science and technology? In response to this concern, the Under Secretary of Defense for Personnel and Readiness asked RAND to convene a meeting held on November 8, 2006, to review evidence presented by experts from academia, government, and the private sector. The papers presented at the meeting addressed a wide range of issues surrounding the United States' current and future S T competitiveness, including science policy, the quantitative assessment of S T capability, globalization, the rise of Asia, particularly China and India, innovation, trade, technology diffusion, the increase in foreign-born S T students and workers in the United States, new directions in the management and compensation of federal S T workers, and national security and the defense industry. These papers provide a partial survey of the facts, challenges, and questions posed by the potential erosion of U S S T capability. The importance of S T to U S prosperity and security warrants that policymakers pay careful attention to the various high-level reports issued over the past few years that warn of pressures on the U S lead in S T. The intellectual point of embarkation for the RAND meeting was the foremost recent such report, *Rising Above the Gathering Storm: Energizing and Employing America for a Brighter Economic Future* by the National Academy of Sciences.
