Heider,Mary Renck Jalongo,2014-12-05 This edited book presents the most

recent theory research and practice on information and technology literacy as it relates to the education of young children. Because computers have made it so easy to disseminate information, the amount of available information has grown at an exponential rate, making it impossible for educators to prepare students for the future without teaching them how to be effective information managers and technology users. Although much has been written about information literacy and technology literacy in secondary education, there is very little published research about these literacies in early childhood education. Recently, the National Association for the Education of Young Children and the Fred Rogers Center for Early Learning and Children's Media at Saint Vincent College published a position statement on using technology and interactive media as tools in early childhood programs. This statement recommends more research to better understand how young children use and learn with technology and interactive media and also to better understand any short and long term effects. Many assume that today's young children are digital natives with a great understanding of technology. However, children may know how to operate digital technology but be unaware of its dangers or its value to extend their abilities. This book argues that information and technology literacy include more than just familiarity with the digital environment. They include using technology safely and ethically to demonstrate creativity and innovation, to communicate and collaborate to conduct research and use information, and to think critically, solve problems, and make decisions.

Contemporary Challenges in Teaching Young Children Gayle Mindes, 2019-09-02. Contemporary Challenges in Teaching Young Children provides both veteran and aspiring early childhood educators with the information and tools they need to build on their understanding of developmentally appropriate practice. Teachers face many challenges, including family configuration, social and political stressors related to accountability requirements, funding shortages, and the resulting need to teach with fewer resources. This innovative book focuses exclusively on problem solving at the classroom level and fosters creative methods of ensuring best practices are in place for all children, including those with limited experience in formal social settings and a lack of self-regulatory behaviors. Drawing on current research and their own wealth of experience, expert contributors cover topics from the critical importance of social-emotional learning to culturally responsive teaching to using technology to empower teachers and learners. Written in accessible, non-technical language, this book addresses complex factors affecting child development, guiding readers through the best strategies for tackling real problems in their practice.

Educating Young Children With and Without Exceptionalities Festus E. Obiakor, Tachelle Banks, Jessica Graves, Anthony F. Rotatori, 2019-02-28. This book emphasizes the importance of developmentally appropriate practices (DAP) in early childhood education (ECE). It highlights the need for interdisciplinary collaboration, intensive intervention, and remedial education. Effective practices include relationship-based teaching, family partnerships, adapting teaching, and more.
