## Spectroscopy From Space:

**Spectroscopy from Space** Jean Demaison, Kamil Sarka, Edward A. Cohen, 2012-12-06 Many satellites have recently been launched or are in preparation which operate in the microwave to IR ranges the main objective being to observe the earth's atmosphere or interstellar clouds Analysis of the data they supply requires extensive laboratory work because we still only have sufficiently accurate data line positions intensities and profiles for only a few species Furthermore the observer community is making increasing calls for laboratory data as new developments open up new observational possibilities such as submillimeter observation Research on these subjects involves many different areas of specialisation in fields of research that generate a wealth of data In Spectroscopy from Space the people responsible for field observations explain which results they are expecting from their measurements and how laboratory people can help them to analyse their satellite data Laboratory spectroscopists explain why what they can do now and what kinds of experiment and theoretical development that might undertake to meet the needs of the remote sensing community The problems of distributing reliable laboratory data in a timely way are also addressed *NASA Thesaurus*, 1988 *Instrumentation for Optical Remote Sensing from Space* John S. **Molecular Processes in Space** Tsutomu Watanabe, 1990-02-28 Like a river the progress of science has a tendency to run fast or slow Once the water meets a dam it may stop for a while but eventually it will flow over the top and run fast again In scientific research a breakthrough to overcome a similar barrier is often made by a small number of scientists or perhaps by a single person of special creativity extraordinary talent and unusual perseverance Through such individuals science can proceed in great strides No one can deny that Professor Kazuo Takayanagi is one of these special individuals who have played a leading role in the field of atomic and molecular physics as well as space physics This book is dedicated to Professor Takayanagi on the occasion of his retirement from the Institute of Space and Astronautical Science Professor Takayanagi was born in 1926 and grew up in Tomakomai in Hokkaido the northern island of Japan In his boyhood he was interested in natural sciences particularly astronomy On 5th February 1943 when he was attending secondary school a solar eclipse was seen in his town He organized a group of students from his school to observe the eclipse He still remembers the scene it grew so dark during the eclipse that two stars Vega and Arcturus could be seen After graduation from the University of Tokyo in 1948 he entered the graduate school there
