STUDIES IN DIGITAL COMMUNICATIONS. PART I. FEASIBILITY OF ASYNCHRONOUS MULTIPLEXING. PART II. PERFORMANCE OF HIGH-SPEED DIGITAL COMMUNICATIONS OVER TROPOSCATTER LINKS M P ISTENBATT, 1963 Part I describes experiments and calculations aimed at demonstrating the feasibility of asynchronous time multiplexing for multichannel speech The work here generally served to elaborate on the theoretical analysis and predictions made previously and demonstrated them in the laboratory The experiments tested various aspects of the method and culminated in a realistic multichannel experiment with external coded speech signals The major feasibility demonstrations were done by using a digital computer with A/D equipment However an analog extremal coding system was built in order to demonstrate the equipment simplicity The work here showed that asynchronous time multiplexing is feasible under the conditions treated for systems having as few as 24 sources It is concluded that the advantage of this method over synchronously multiplexed PCM is about 2.7 for 100 sources and 2.1 and 24 sources Increases in this advantage should be possible with system improvements The speech quality with this advantage is not distinguishable with casual listening from that of the usual PCM Author **Teleconferencing and Electronic Communications**, 1985 Proceedings of the 34th Annual Hawaii International Conference on System Sciences Ralph H. Sprague, Jr., 2001 Annotation Contains abstracts of 440 papers presented at the January 2001 conference in nine major tracks The session topics are collaboration systems and technology complex systems decision technologies for management digital documents emerging technologies information technology in health care Internet and the digital economy organizational systems and technology and software technology Subject headings within the sessions include asynchronous learning networks intelligent systems in traffic and transportation e government telemedicine web engineering community informatics trends in outsourcing of information systems mobile computing and wireless networks and domain specific languages for software engineering No subject index The CD ROM contains the complete papers in Adobe Acrobat format The disc is of a hybrid structure that allows access from PCs Macintosh and UNIX Annotation copyrighted by Book News Inc Portland OR **Creative Teaching**, 1999 **The Allyn & Bacon Handbook** Leonard J.
