Teaching Science in Secondary Schools Sandra Amos, Richard Boohan, 2013-10-11 A companion to Aspects of Teaching Secondary Science the first section of this reader provides an overview of the key issues discussing the nature of science and its role in the school curriculum The second section goes on to examine critically the ways in which science is reflected in the school curriculum while the third section discusses recent curriculum initiatives and developments Turning the focus from what is taught on to who is taught section four shows that students are very much active learners in the classroom making sense of their experiences and constructing their own meanings The final section covers the role of research in science education giving examples of research papers and considering how productive collaboration between teachers and researchers can impact upon the effectiveness of classroom practice

Language and Literacy in Science Education Jerry Wellington, Jonathan Osborne, 2001-03-16 Science in secondary schools has tended to be viewed mainly as a practical subject and language and literacy in science education have been neglected But learning the language of science is a major part of science education every science lesson is a language lesson and language is a major barrier to most school students in learning science This accessible book explores the main difficulties in the language of science and examines practical ways to aid students in retaining understanding reading speaking and writing scientific language Jerry Wellington and Jonathan Osborne draw together and synthesize current good practice thinking and research in this field They use many practical examples illustrations and tried and tested materials to exemplify principles and to provide guidelines in developing language and literacy in the learning of science They also consider the impact that the growing use of information and communications technology has had and will have on writing reading and information handling in science lessons The authors argue that paying more attention to language in science classrooms is one of the most important acts in improving the quality of science education This is a significant and very readable book for all student and practising secondary school science teachers for science advisers and school mentors

of education as well as any satisfactory science of human nature will have to be based on a recognition of the fact that social institutions such as language number science customs and laws are far more significant than are individual modes of thought and behavior Pr face PsycINFO Database Record c 2014 APA all rights reserved *Educational Times* ,1916 **THE EDUCATIONAL TIMES, AND JOURNAL OF THE COLLEGE PRECEPTORS.** c.f hodgson and sons,2, gough square,1880
