Text Mining for Information Professionals Manika Lamba, Margam Madhusudhan, 2022-04-21 This book focuses on a basic theoretical framework dealing with the problems, solutions, and applications of text mining and its various facets in a very practical form of case studies, use cases, and stories. The book contains 11 chapters with 14 case studies showing 8 different text mining and visualization approaches and 17 stories. In addition, both a website and a Github account are also maintained for the book. They contain the code, data, and notebooks for the case studies, a summary of all the stories shared by the librarians, faculty, and hyperlinks to open an interactive virtual RStudio Jupyter Notebook environment. The interactive virtual environment runs case studies based on the R programming language for hands-on practice in the cloud without installing any software. From understanding different types and forms of data to case studies showing the application of each text mining approach on data retrieved from various resources, this book is a must-read for all library professionals interested in text mining and its application in libraries.
