Watershed Management for Potable Water Supply National Research Council,Commission on Geosciences, Environment, and Resources,Water Science and Technology Board,Committee to Review the New York City Watershed Management Strategy,2000-02-17 In 1997 New York City adopted a mammoth watershed agreement to protect its drinking water and avoid filtration of its large upstate surface water supply Shortly thereafter the NRC began an analysis of the agreement s scientific validity The resulting book finds New York City s watershed agreement to be a good template for proactive watershed management that if properly implemented will maintain high water quality However it cautions that the

agreement is not a guarantee of permanent filtration avoidance because of changing regulations uncertainties regarding pollution sources advances in treatment technologies and natural variations in watershed conditions The book recommends that New York City place its highest priority on pathogenic microorganisms in the watershed and direct its resources toward improving methods for detecting pathogens understanding pathogen transport and fate and demonstrating that best management practices will remove pathogens Other recommendations which are broadly applicable to surface water supplies across the country target buffer zones stormwater management water quality monitoring and effluent trading

Water Quality Management in the Americas Asit K. Biswas, Cecilia Tortajada, Benedito Braga, Diego J. Rodriguez, 2006-02-09 Considerable attention has been given during the past few years to the water crisis that many regions of the world may face in the coming decades While the magnitude and the extent of the global water scarcity problems of the future should not be underestimated a serious analysis of the current trends indicate that the main water crisis in the coming years is most likely to stem primarily from water quality deterioration and lack of investment funds rather than from physical water scarcities per se as is widely expected at present In spite of the seriousness of continuing water quality deterioration in most countries of the world water quality management continues to be a somewhat neglected issue in the international water community Even the magnitudes and trends of the water quality problems are not reliably known in many developed countries and in nearly all developing ones Accordingly in order to assess the current situation in water quality management in the Americas and to discuss the alternatives available to improve the existing and future water quality conditions in a cost effective and timely manner the Third World Centre for Water Management in Mexico the National Water Agency in Brazil Agência Nacional deguas and the Inter American Development Bank organised a workshop on Water Quality Management for the Americas in Fortaleza Brazil 12-13 April 2004 **Illinois Water Quality Management Plan** Illinois.
