Wavelet Methods for Pointwise Regularity and Local Oscillations of Functions Stéphane Jaffard, 1996

Wavelet Methods for Pointwise Regularity and Local Oscillations of Functions Stéphane Jaffard, Yves Meyer, 1996-10-29 Currently new trends in mathematics are emerging from the fruitful interaction between signal processing image processing and classical analysis One example is given by wavelets which incorporate both the know how of the Calderon Zygmund school and the efficiency of some fast algorithms developed in signal processing quadrature mirror filters and pyramidal algorithms A second example is multi fractal analysis The initial motivation was the study of fully developed turbulence and the introduction by Frisch and Parisi of the multi fractal spectrum Multi fractal analysis provides a deeper insight into many classical functions in mathematics A third example chirps is studied in this book Chirps are used in modern radar or sonar technology Once given a precise mathematical definition chirps constitute a powerful tool in classical analysis In this book wavelet analysis is related to the 2 microlocal spaces discovered by J M Bony The authors then prove that a wavelet based multi fractal analysis leads to a remarkable improvement of Sobolev embedding theorem In addition they show that chirps were hidden in a celebrated Riemann series Features Provides the reader with some basic training in new lines of research Clarifies the relationship between pointwise behavior and size properties of wavelet coefficients *Wavelet Methods In Mathematical Analysis And Engineering* Alain Damlamian, Stéphane Jaffard, 2010-09-21 This book gives a comprehensive overview of both the fundamentals of wavelet analysis and related tools and of the most active recent developments towards applications It offers a state of the art in several active areas of research where wavelet ideas or more generally multiresolution ideas have proved particularly effective The main applications covered are in the numerical analysis of PDEs and signal and image processing Recently introduced techniques such as Empirical Mode Decomposition EMD and new trends in the recovery of missing data such as compressed sensing are also presented Applications range for the reconstruction of noisy or blurred images pattern and face recognition to nonlinear approximation in strongly anisotropic contexts and to the classification tools based on multifractal analysis Scaling, Fractals and Wavelets Patrice Abry, Paolo Goncalves, Jacques Levy Vehel, 2013-03-01 Scaling is a mathematical transformation that enlarges or diminishes objects The technique is used in a variety of areas including finance and image processing This book is organized around the notions of scaling phenomena and scale invariance The various stochastic models commonly used to describe scaling self similarity long range dependence and multi fractals are introduced These models are compared and related to one another Next fractional integration a mathematical tool closely related to the notion of scale invariance is discussed and stochastic processes with prescribed scaling properties self similar processes locally self similar processes fractionally filtered processes iterated function systems are defined A number of applications where the scaling paradigm proved fruitful are detailed image processing financial and stock market fluctuations geophysics scale relativity and fractal time space Mathematical Image

Processing Maïtine Bergounioux, 2011-05-12 The contributions appearing in this volume are a snapshot of the different topics that were discussed during the Second Conference Mathematics and Image Processing held at the University of Orleans in 2010 They mainly concern image reconstruction texture extraction and image classification and involve a variety of different methods and applications Therefore it was impossible to split the papers into generic groups which is why they are presented in alphabetic order However they mainly concern texture analysis 5 papers with different techniques variational analysis wavelet and morphological component analysis fractional Brownian fields geometrical methods 2 papers for restoration and invariant feature detection classification with multifractal analysis neurosciences imaging and analysis of Multi Valued Images Analysis, Applications, and Computations Uwe Kähler, Michael Reissig, Irene Sabadini, Jasson Vindas, 2023-10-30 This volume contains the contributions of the participants of the 13th International ISAAC Congress 2021 held in Ghent Belgium The papers written by respected international experts address recent results in mathematics with a special focus on analysis The volume provides to both specialists and non specialists an excellent source of information on current research in mathematical analysis and its various interdisciplinary applications *Numerical Methods in Fluid Mechanics* Alain Vincent, 1998 At a level comprehensible to graduate students and beginning researchers describes the state of the art in using numerical methods for analyzing turbulence in fluids a problem still unsolved after centuries of research The methods described include wavelet based semi Lagrangian Langrangian multi pole continuous adaptation of curvilinear grids finite volume and shock capturing Among the applications are industrial flows aerodynamics two phase flows astrophysical flows and meteorology Suitable as a course text for graduate students with a background in fluid mechanics No index Annotation copyrighted by Book News Inc Portland OR *Wavelets* Stephane Jaffard, Yves Meyer, Robert Dean Ryan, 2001-01-01 This long awaited update of Meyer s Wavelets algorithms and applications includes completely new chapters on four topics wavelets and the study of turbulence wavelets and fractals which includes an analysis of Riemann s nondifferentiable function data compression and wavelets in astronomy The chapter on data compression was the original motivation for this revised edition and it contains up to date information on the interplay between wavelets and nonlinear approximation The other chapters have been rewritten with comments references historical notes and new material Four appendices have been added a primer on filters key results with proofs about the wavelet transform a complete discussion of a counterexample to the Marr Mallat conjecture on zero crossings and a brief introduction to Hlder and Besov spaces In addition all of the figures have been redrawn and the references have been expanded to a comprehensive list of over 260 entries The book includes several new results that have not appeared elsewhere **Fractal Geometry and Applications: A Jubilee of Benoit Mandelbrot** Michel Laurent Lapidus, Machiel Van Frankenhuysen, 2004 This volume offers an excellent selection of cutting edge articles about fractal geometry covering the great breadth of mathematics and related areas touched by this subject Included are rich survey articles and fine expository papers The high quality contributions to the volume by well known

researchers including two articles by Mandelbrot provide a solid cross section of recent research representing the richness and variety of contemporary advances in and around fractal geometry In demonstrating the vitality and diversity of the field this book will motivate further investigation into the many open problems and inspire future research directions It is suitable for graduate students and researchers interested in fractal geometry and its applications This is a two part volume Part 1 covers analysis number theory and dynamical systems Part 2 multifractals probability and statistical mechanics and applications
