Weld Design and Production Robert E. Kinkead, 1930

Journal of the American Welding Society American Welding Society, 1929

Welded joint design using finite element solutions for plate models, 2005 Neste trabalho apresenta-se o desenvolvimento teórico e a implementação de uma metodologia proposta para o dimensionamento de juntas soldadas baseada em soluções de modelos de placas obtidas por elementos finitos. A técnica consiste em a partir da avaliação do estado de tensões nas proximidades da junta resultante da simulação numérica sob carregamentos reais obter-se adimensões requeridas da seção transversal da garganta ao longo do comprimento do cordão de solda. No dimensionamento do cordão consideram-se simplificações das distribuições das componentes de tensões ao longo da espessura da casca inerentes aos modelos de cascas finas. Com o objetivo de testar-se a aplicabilidade da metodologia proposta em soluções numéricas apresenta-se inicialmente o dimensionamento de cordões de solda sob carregamentos simples: cisalhamento transversal, membrana e flexão em que os resultados são verificados com os obtidos de modelos analíticos. Além destes são também apresentadas soluções para estruturas complexas formadas por chapas soldadas como exemplos de aplicação prática da implementação desenvolvida.
