Workview Office

Richard F. Tinder

Workview Office:

Workview Office Student Edition R. James Duckworth,1997 This edition combines realistic logic design exercises and computer aided engineering software from Viewlogic Systems The class tested laboratory exercises provide realistic examples of combinational and sequential circuits and are used in a tutorial manner to demonstrate how to use the design entry and analysis tools of Workview Office Students are given access to the same type and versions of design tools used by practicing engineers allowing them to spend their time developing a sound understanding of theory and design principles rather than wasting time manually constructing and debugging circuits in the lab They can draw circuit designs using the ViewDraw schematic editor and then perform extensive analysis using the ViewSim gate level simulator As the circuit is tested ViewSim back annotates the circuit drawing with the new digital logic values at all nodes providing solid feedback on how a circuit is actually performing during tests and making fault finding easy Proceedings ,1997 Engineering Digital Design Richard F. Tinder,2000-01-07 The options include the lumped path delay LPD model or NESTED CELL model for asynchronous FSM designs and the use of D FLIP FLOPs for synchronous FSM designs The background for the use of ADAM is covered in Chapters 11 14 and 16 of the REVISED 2nd Edition 5 A OPS design software A OPS for Asynchronous One hot Programmable Sequencers is another very powerful productivity tool that permits the design of asynchronous and synchronous state machines by using a programmable sequencer kernel This software generates a PLA or PAL output file in Berkeley format or the VHDL code for the automated timing defect free designs of the following a Any 1 Hot programmable sequencer up to 10 states b The 1 Hot design of multiple asynchronous or synchronous state machines driven by either PLDs or RAM The input file is that of a state table for the desired state machine

Neural and Fuzzy Logic Control of Drives and Power Systems Marcian Cirstea,2002-10-08 Introduces cutting edge control systems to a wide readership of engineers and students The first book on neuro fuzzy control systems to take a practical applications based approach backed up with worked examples and case studies Learn to use VHDL in real world applications Introducing cutting edge control systems through real world applications Neural networks and fuzzy logic based systems offer a modern control solution to AC machines used in variable speed drives enabling industry to save costs and increase efficiency by replacing expensive and high maintenance DC motor systems The use of fast micros has revolutionised the field with sensorless vector control and direct torque control This book reflects recent research findings and acts as a useful guide to the new generation of control systems for a wide readership of advanced undergraduate and graduate students as well as practising engineers The authors guide readers quickly and concisely through the complex topics of neural networks fuzzy logic mathematical modelling of electrical machines power systems control and VHDL design Unlike the academic monographs that have previously been published on each of these subjects this book combines them and is based round case studies of systems analysis control strategies design simulation and implementation The result is a guide to applied control systems design that will appeal

equally to students and professional design engineers The book can also be used as a unique VHDL design aid based on real world power engineering applications
