Stabilization Problems with Constraints Vladimir A Bushenkov,Georgi V Smirnov,2021-12-24 Presents and demonstrates stabilizer design techniques that can be used to solve stabilization problems with constraints These methods have their origins in convex programming and stability theory However to provide a practical capability in stabilizer design the methods are tailored to the special features and needs of this field Hence the main emphasis of this book is on the methods of stabilization rather than optimization and stability theory The text is divided into three parts Part I contains some background material Part II is devoted to behavior of control systems taking examples from mechanics to illustrate the theory Finally Part III deals with nonlocal stabilization problems including a study of the global stabilization problem

Topics in Stabilization Under Constraints and Synchronization Problems Xu Wang,2012 When the issues related to internal stabilization are resolved the research is directed to simultaneous stabilization problems The focus here is linear system subject to input saturation In the case where disturbances that are additive to the input we complement the existing results in the literature by solving the simultaneous stabilization problems for discrete time linear systems subject to input saturation Then attention is paid to non input additive disturbances This research is carried out using a progressive approach The results are obtained and generalized from a simple double integrator to the most general linear systems It is found that the simultaneous stabilization problems are solvable if the disturbances do not contained large frequency component corresponding to the open loop eigenvalues on the stability margin For those disturbances that meet this criterion dynamical feedback controller can be constructed to achieve simultaneous stabilization
