## Today Level F:

*Introduction to Distributed Algorithms* Gerard Tel, 2000-09-28 Distributed algorithms have been the subject of intense development over the last twenty years. The second edition of this successful textbook provides an up to date introduction both to the topic and to the theory behind the algorithms. The clear presentation makes the book suitable for advanced undergraduate or graduate courses whilst the coverage is sufficiently deep to make it useful for practising engineers and researchers. The author concentrates on algorithms for the point to point message passing model and includes algorithms for the implementation of computer communication networks. Other key areas discussed are algorithms for the control of distributed applications, wave broadcast election, termination detection, randomized algorithms for anonymous networks, snapshots, deadlock detection, synchronous systems and fault tolerance achievable by distributed algorithms. The two new chapters on sense of direction and failure detectors are state of the art and will provide an entry to research in these still developing topics.

**Quantitative Social Science Research in Practice** Charlette Donalds, Kweku-Muata Osei-Bryson, 2025-01-02 Quantitative Social Science Research in Practice: Generating Novel and Parsimonious Explanatory Models for Social Sciences examines quantitative Behavioral Science Research (BSR) by focusing on four key areas: Developing Novel Parsimonious and Actionable Causal Models; Researchers often face challenges in creating new parsimonious causal models supported by empirical evaluation. A promising approach involves using meta-analytic reviews and more recent studies to identify relevant constructs and hypotheses that would constitute the new causal model; Exploring the Scope of Context for a Novel Causal Model. The relevance of causal models may vary based on context such as national or organizational culture, economic and political situations, and feasibility constraints. Behavioural science researchers have struggled to balance rigor and relevance as theories effective in one context may not be valid in another. This book presents an approach to determine the contextual scope for new causal models; Guidance to Practice from a Novel Causal Model. Quantitative BSR studies should offer practical guidance but often this guidance is vague or superficial. This book proposes an approach to highlight actionable insights derived from data analysis of new causal models, ensuring that the research offers concrete guidance for practitioners; Implementing Guidance from Causal Models. A significant limitation of BSR studies is the lack of clarity on how results can be made actionable for decision makers, considering the costs and benefits of actions. This book presents a method to make research results actionable, especially for models with high explanatory and predictive power. The book is designed to be useful for various audiences: Business Managers and Practitioners. Those conducting or utilizing quantitative BSR for decision making can find practical approaches for developing and applying causal models; Master's and PhD Students. Students across disciplines interested in quantitative BSR can gain insight into novel methods for creating strong causal models; Active Scholars/Researchers aiming to apply new approaches in their work can benefit from the strategies outlined; Professors and Instructors. Those teaching research methodology or supervising theses can find the

book a valuable resource for guiding students in their research projects The book aims to advance the field of quantitative BSR by providing robust methodologies for developing contextualizing and implementing causal models ensuring both academic rigor and practical relevance
