globe are setting targets for reducing their carbon emissions For example the UK Government has committed to an eighty per cent reduction by 2050 when twenty eight million buildings that currently exist will still be standing this represents a challenge to improve the energy efficiency of more than one building per minute between now and 2050 This is a problem that needs tackling worldwide and is a challenge to both the refurbishment sector of the global construction industry and to those who own and operate existing buildings Sustainable Retrofit and Facilities Management provides comprehensive guidance to those involved in the refurbishment and management of existing buildings on minimizing carbon emissions water consumption and waste to landfill along with enhancing the long term sustainability of a building Practical guidance is provided on measures that can be used to improve the efficiency and sustainability of existing buildings through both good management and refurbishment Also explored is the relationship between the refurbishment of existing buildings facility management and the wider community infrastructure The book looks at management tools such as post occupancy evaluation building health checks energy management software green building management toolkits and green leases Illustrated throughout with case studies and examples of best practice this is a must have handbook for engineers architects developers contractors and facility managers

How Much Energy Does Your Building Use? Kerry Mashford,Liz Reason,2017-09-08 Why do award winning green buildings so often have higher energy bills than ordinary buildings Why do expensive refurbishments deliver outcomes that are far from the promises of improved sustainability Why does your building have high running costs and still the occupants complain about being too cold or too hot and are otherwise dissatisfied The failure of many countries to produce buildings that are comfortable with excellent energy performance is a scandal Achieving low energy buildings does not involve learning rocket science just some basic building physics a clear language for talking meaningfully about energy efficient outcomes with all those in the buildings cycle and an outlook that casts a new low energy perspective on old problems This book provides that common language It outlines a path towards understanding what makes for a good quality low energy building the stakeholders that need to be engaged and encourages new ways of thinking about how to reduce energy use and costs This book is for everyone in the buildings cycle from CEOs of major construction companies to Sustainability Energy Environment Facilities and Utilities managers in any company that aims to reduce energy use in a non domestic building

Local Climate Action Planning Michael R. Boswell,Adrienne I. Greve,Tammy L. Seale,2012-07-16 Climate change is a global problem but the problem begins locally Cities consume 75% of the world s energy and emit 80% of the world s greenhouse gases Changing the way we build and operate our cities can have major effects on greenhouse gas emissions Fortunately communities across the U S are responding to the climate change problem by making plans that assess their contribution to greenhouse gas emissions and specify actions they will take to reduce these emissions This is the first book designed to help planners municipal staff and officials citizens and others working at local levels to develop Climate Action Plans CAPs are strategic plans that establish policies and programs for mitigating a

community's greenhouse gas (GHGs) emissions. They typically focus on transportation energy use and solid waste and often differentiate between community-wide actions and municipal agency actions. CAPs are usually based on GHG emissions inventories which identify the sources of emissions from the community and quantify the amounts. Additionally, many CAPs include a section addressing adaptation: how the community will respond to the impacts of climate change on the community such as increased flooding, extended drought, or sea level rise. With examples drawn from actual plans, Local Climate Action Planning guides preparers of CAPs through the entire plan development process, identifying the key considerations and choices that must be made in order to assure that a plan is both workable and effective.
