Early Warning Systems for Natural Disaster Reduction Jochen Zschau, Andreas N. Küppers, 2013-11-11 This volume is the result of the International IDNDR Conference on Early Warning Systems for the Reduction of Natural Disasters held at the Geo Forschungszentrum in Potsdam Germany from 7-11 September 1998. Endorsed by the United Nations International Decade for Natural Disaster Reduction which had been established by the United Nations General Assembly in December 1989, it was jointly organised by the GeoForschungszentrum Potsdam and the German IDNDR Committee. The event brought together 370 scientists, public officials and representatives of the United Nations system, non-governmental and international organisations and diverse professional, commercial and civic individuals from 86 countries. Together they comprised a wide and multidisciplinary range of experience as both providers and users of early warning and preparedness information related to natural disasters. The Potsdam Early Warning Conference represented the first major thematic component of IDNDR's concluding evaluation. It provides recommendations to ensure disaster reduction into the 21st Century. The conference dealt with an essential goal of the decade expressed as a major priority of the Decade's Scientific and Technical Committee. It was included in the Plan of Action adopted at the 1994 World Conference on Natural Disaster Reduction in Yokohama, Japan, and was the subject of three subsequent UN General Assembly resolutions on the improved effectiveness of early warning between 1994 and 1997. The German Minister for Foreign Affairs Mr *Extreme Environmental Events* Robert A. Meyers, 2010-11-03. *Extreme Environmental Events* is an authoritative single source for understanding and applying the basic tenets of complexity and systems theory as well as the tools and measures for analyzing complex systems to the prediction, monitoring and evaluation of major natural phenomena affecting life on earth. These phenomena are often highly destructive and include earthquakes, tsunamis, volcanoes, climate change and weather. Early warning, damage and the immediate response of human populations to these phenomena are also covered from the point of view of complexity and nonlinear systems. In 61 authoritative state-of-the-art articles, world experts in each field apply such tools and concepts as fractals, cellular automata, solitons, game theory, network theory and statistical physics to an understanding of these complex geophysical phenomena.
