

Generative Grammar

- A *Generative Grammar* is a set of formal rules that can generate an infinite set of sentences that constitute the language as a whole.

Chomsky insisted that a grammar -

- Must systematically describe all of the sentences in a language that a native speaker would regard as grammatical.
- Must sort out all of the possible "good" sentences from all of the possible "bad" ones.
- Must use a finite set of rules.
- Must provide a way to account for our perceived ambiguity of certain sentences.
