Syntax Of Scope:

Bracketing Paradox and Direct Compositionality Kazuhiko Fukushima, 2022-11-30 In Bracketing Paradox and Direct Compositionality Montagovian Morphology for Bound Morphemes Kazuhiko Fukushima resolves bracketing paradoxes in Japanese morphological vs semantic incongruity which supposedly pose insurmountable obstacles to traditional and simple minded morphology within morphology the lexicon proper This resolution is achieved through formal semantic apparatus developed by Richard Montague and his followers hence the label Montagovian Morphology More generally and theoretically this book addresses the issue of the optimal interface between morphology which deals with minimal units of meaning and their combination within a word and semantics which handles increasingly larger units of meaning in the sentence Fukushima argues that the nature of the interface is directly compositional requiring no complex syntactic supposition or manipulation other than putting words together as is The author concludes that a semantically reinforced morphological that is lexical approach is superior to a syntactic one for characterizing the mapping between morphological and semantic domains and that syntax per se cannot supersede morphology

Particle Verbs and Local Domains Jochen Zeller, 2001-01-01 This book offers a new account of particle verbs in German and Dutch by looking at the conditions under which a non morphological structure may exhibit word like properties It shows that although particles are represented as phrasal complements of their verbs they lack the functional structure which is usually associated with phrases The author uses the concept of a local domain which can be established by terminal nodes both in syntax and in morphology to demonstrate why the impoverished syntactic structure of particle verbs shares important features of complex words derived in morphology The analysis is substantiated through a detailed study of the syntactic semantic and morphological properties of particle verbs Special attention is given to the relevance of local domains for the association of lexical information about sound and meaning with terminal nodes in morphological and syntactic structures
