Dynamical Systems Wang Sang Koon,Martin W. Lo,Jerrold E. Marsden,2011-06-01 This book considers global solutions to the restricted three body problem from a geometric point of view The authors seek dynamical channels in the phase space which wind around the planets and moons and naturally connect them These low energy passageways could slash the amount of fuel spacecraft need to explore and develop our solar system In order to effectively exploit these passageways the book addresses the global transport It goes beyond the traditional scope of libration point mission design developing tools for the design of trajectories which take full advantage of natural three or more body dynamics thereby saving precious fuel and

gaining flexibility in mission planning This is the key for the development of some NASA mission trajectories such as low energy libration point orbit missions e g the sample return Genesis Discovery Mission low energy lunar missions and low energy tours of outer planet moon systems such as a mission to tour and explore in detail the icy moons of Jupiter This book can serve as a valuable resource for graduate students and advanced undergraduates in applied mathematics and aerospace engineering as well as a manual for practitioners who work on libration point and deep space missions in industry and at government laboratories the authors include a wealth of background material but also bring the reader up to a portion of the research frontier Bulletin (new Series) of the American Mathematical Society ,1904 Death's End Cixin Liu,2016-09-20
