The Best Knowledge of Project Management Ram Babu Sao,2025-11-14 This book The Best Knowledge of Project Management is intended for the best way to Project Planning and Review work Project management is all about change Think about the scope of changes personnel changes and budget changes that are all part of the job The best project managers find a way to stay on top of change not just within individual projects but across the span of a career With that in mind we put out a call asking veteran project managers for their thoughts on how project management has changed over the past several decades Project management methodology began to take form with the advent of the Critical Path Method CPM and the Program Evaluation and Review Technique PERT The Critical Path Method CPM was developed by Dupont CPM is a technique used to predict project duration by analysing which sequence of activities has the least amount of scheduling flexibility It was designed to address the complex process of shutting down chemical plants for maintenance and maintenance The PERT is a method for analysing the tasks involved in completing a project especially the time needed to complete each task and identifying the minimum time needed to complete the total project Project management was largely based on Waterfall techniques This was good enough to land men on the moon and bring them home safely But the world has only become more complex and we ve seen project management techniques adapt to those changes over time The American Association of Cost Engineers invented the Program Evaluation Review Technique PERT first for the U S Navy s Polaris Project The Gantt Chart Developed by Henry Gantt in 1917 One of the forefathers of project management Henry Gantt is best known for creating his self named scheduling diagram the Gantt chart In the 1950s project management methodology began to take form with the advent of the Critical Path Method CPM for the Polaris missile project and the U S Navy s development of the Program Evaluation and Review Technique PERT The American Association of Cost Engineers invented the Total Cost Management Framework Early practitioners of project management and the associated specialties of planning and scheduling cost estimating cost and schedule control formed the AACE in 1956 Total cost management is a process for applying the skills and knowledge of cost engineering It is also the first integrated process or method of portfolio programmed and project management The United States Department of Defense created the WBS concept as part of the Polaris mobile submarine launched ballistic missile project

[Project Planning as Key to Success in Project Management](#) Stefanie Vater,2012-05-24 Bachelor Thesis from the year 2012 in the subject Business economics Business Management Corporate Governance grade 1 1 University of applied sciences D sseldorf language English abstract A CEO is presenting the annual report in front of 20 000 employees when suddenly the projector breaks down A key account manager cannot pay the restaurant bill for his top client as he has lost his

wallet A newly elected mayor misses his first public speech as he is being held up in a traffic jam All these examples taken from daily business and their negative effects such as the loss of time a damaged reputation and higher costs could have been avoided with an appropriate planning beforehand Projects are even more critical as they are by definition unique Although this idea seems to be consistent and companies should therefore strive to complete their projects successfully only 32 % of all projects succeed in terms of compliance with time budget and specifications 44 % are completed late exceeding budget showing a deficit in features or with a combination thereof The remaining 24 % of all projects fail i e they are cancelled before completion or are finished but never used Going back to the year 2000 this failure rate has never been higher A reason for this may be that the unique nature of projects also implies uncertainties the more aspects of a project are unique the higher are the entailed uncertainties and the higher is the risk to fail And projects are becoming more and more demanding with an increasing pressure on companies in terms of time budget and quality As globalisation is rising the need for fast and comprehensive adjustments of processes systems and products is increasing simultaneously To be able to bear the growing competitive pressure companies need fast innovative and interdisciplinary solutions which they achieve best by applying projects But projects lacking clear targets specifications communication channels schedules and budgets are likely to fail Hence an appropriate project planning is vital to avoid or at least minimise all uncertainties and risks that could lead to a full or partial failure of the project But project planning itself does not guarantee success It must be executed in a way that is comprehensive and efficient at the same time Finding out which planning processes are required and to which detail is crucial for performing a completely successful project
