This book is the second of two volumes (Schifter 1996) resulting from the work of the Mathematics Process Writing Project (MPWP) in the United States of America. The project was directed over a three-year period (1990–1993) by Deborah Schifter of the Center for the Development of Teaching at the Education Development Center in Newton (Massachusetts) and was an extension of the work of the SummerMath for Teachers courses at Mount Holyoke College in South Hadley (Massachusetts) which Schifter directed from 1988 to 1993. The MPWP involved 48 teachers (44 women and four men) in the production of narratives (49 are mentioned on p. 5) about their classroom experiences in mathematics. In the first volume, 13 narratives were published and the second volume here under review includes nine narratives from elementary school teachers spanning Grades Kindergarten through 6. Four mathematics teacher educators provide commentaries on three pairs and one trio of narratives. Schifter provides an introduction, a conclusion and two appendices which helpfully include details of the structure of the MPWP courses, and the reading and writing assignments given to the participants.

In order to understand the significance of this book for the international development of mathematics education it is necessary to situate it in the context of recent developments in the USA. Schifter (p. 1) refers to “a convergence between changing social needs and two decades of research in cognitive psychology” which has helped to shape a new vision of the teaching and learning process in classrooms. This vision has been embodied in a number of influential policy documents over the last ten years, including major publications from the Mathematical Association of America (1991), the National Council of Teachers of Mathematics (1991) and the National Research Council (1989, 1990).

Central to this vision is a constructivist view of learning in which each student builds a personal set of meanings for the mathematics in the curriculum as implemented by teachers in the classroom. In the words of the National Research Council (1989, p. 58–59), for students to understand what they learn “they must enact for themselves verbs that permeate the mathematics curriculum: ‘examine’, ‘represent’, ‘transform’, ‘solve’, ‘apply’, ‘prove’, ‘communicate’.” This view of the learning process has fundamental implications for both the forms of student engagement to be promoted in the mathematics classroom and the role of the teacher as a facilitator in

such engagement. The emphasis shifts to communication and collaboration among students in posing questions, formulating conjectures, discussing problems and evaluating solutions. In all this, the teacher “guided by close analysis of her students’ thinking, frames appropriate problem-solving contexts for them, facilitates discussion of their mathematical ideas, and steers them toward confrontation with important conceptual issues” (p. 1).

Translation of the rhetoric associated with this vision into curriculum reality requires practising teachers to “construct for themselves practices appropriate to its principles” (p. 1). As Schifter emphasises, such a process is complex and challenging for teachers, and involves “reconstructing professional identities” which is the subtitle of the book. As she makes clear, the major motivation for this book (and its companion volume) was the need for a “wealth of images” to provide interpretations for the “rhetorical motifs” of the reform movement (p. 6). The book provides a public contribution to what should, in Schifter’s view, be a continuous and unending process of professional learning about how students learn.

For the teacher contributors themselves, writing about their own classroom inquiries was an important part of their personal learning progression, supported by the MPWP courses. The teachers used tape recording, note taking, transcription, recollection and discussion with other teachers to inform their narratives. On the MPWP courses the teachers were also provided with formative reading and writing assignments, and regular feedback from Schifter, their instructor. Production of the final public narratives was nonetheless “time-consuming, exposing, and difficult” (p. 175). But the editor expresses the conviction that such writing “represents a form of professional research uniquely suited to the project of reform” (p. 175) which the writing was intended to support.

Seven of the nine narratives are presented under three headings which capture different aspects of the process of professional reconstruction: teachers as mathematical thinkers, as managers of the classroom, and as monitors of student learning. The two other narratives illustrate particular aspects of the new pedagogy and reflective practice focused on a scheme for graphical work and the use of student journals, both in Grade 3.

The first two narratives, from Lisa Yaffee and Nora L. Toney, concentrate on these teachers’ personal mathematics education and the tensions created between their past experiences and struggles as learners at the receiving end of mathematics instruction and the challenges of the new pedagogy as embodied in the summer and MPWP courses. The two narratives highlight the need to address elementary school teachers’ attitudes and feelings, which they bring to their own teaching and to in-service courses, as well as their perceptions of mathematical thinking. Toney, in particular, opens up and confronts much wider issues of race and gender which strongly impacted on her own mathematics education. In her essay on the two narratives, Deborah Loewenberg Ball draws out some of the implications of these teachers’ autobiographies for strategies to support the change process, including the potential and limitations of curriculum materials, courses and teachers’
