From the Preface Chemotaxis and inflammation as many other biological processes can be divided into humoral and cellular components In this simplest sense soluble activators or mediators of host or external origin interact with cells that respond to signals received and transmitted via specific membrane receptors The biological consequences are dramatic and the biochemical mechanisms are complex and interrelated through a series of cascades that may involve several chemical messengers of different chemical classes Volumes 162 and 163 of *Methods in Enzymology* cover in vitro and in vivo methodology that has been developed for the purpose of studying the biochemistry of these active humoral factors and the biology of the cells and their receptors that respond to the various signals The literature dealing with chemotaxis and inflammation is extensive and new techniques are constantly being developed Therefore some selection has been necessary to include the most commonly used and generally applicable techniques Newer methods often involve significant modifications of established procedures and we have tried to insure that these innovations have been included Initiation and Termination of Cyclic Nucleotide Action, 1988-06-28 Novel approaches for the study of phosphodiesterases and phosphoprotein phosphatases as well as those of nonmammalian cyclic nucleotide receptors are emphasized for the first time in the *Methods of Enzymology* series New methods for the study of protein kinases are also presented Membrane Biogenesis Sidney Fleischer, Lester Packer, Becca Fleischer, 1974 FROM THE PREFACE Volumes 96 to 98 Parts J K and L of the *Biomembranes* series focus on methodology to study membrane biogenesis assembly targeting and recycling This field is one of the very exciting and active areas of research Future volumes will deal with transport and other aspects of membrane function **Calcium and Lipids** P.
