Stable Adaptive Control and Estimation for Nonlinear Systems, 2002 [Fault Diagnosis of Nonlinear Systems Using a Hybrid Approach](#) Ehsan Sobhani-Tehrani, Khashayar Khorasani, 2009-06-06

The increasing complexity of space vehicles such as satellites and the cost reduction measures that have affected satellite operators are increasingly driving the need for more autonomy in satellite diagnostics and control systems Current methods for detecting and correcting anomalies onboard the spacecraft as well as on the ground are primarily manual and labor intensive and therefore tend to be slow Operators inspect telemetry data to determine the current satellite health They use various statistical techniques and models but the analysis and evaluation of the large volume of data still require extensive human intervention and expertise that is prone to error Furthermore for spacecraft and most of these satellites there can be potentially unduly long delays in round trip communications between the ground station and the satellite In this context it is desirable to have onboard fault diagnosis system that is capable of detecting isolating identifying or classifying faults in the system without the involvement and intervention of operators Toward this end the principle goal here is to improve the efficiency accuracy and reliability of the trend analysis and diagnostics techniques through utilization of intelligent based and hybrid based methodologies

Mahmoud,2017-06-15 This textbook explains the principles of fuzzy systems in some depth together with information useful in realizing them within computational processes The various algorithms and example problem solutions are a well balanced and pertinent aid for research projects laboratory work and graduate study In addition to its worked examples the book also uses end of chapter exercises as an instructional aid The content of the book is developed and extended from material taught for four years in the author s classes The text provides a broad overview of fuzzy control estimation and fault diagnosis It ranges over various classes of target system and modes of control and then turns to filtering stabilization and fault detection and diagnosis Applications simulation tools and an appendix on algebraic inequalities complete a unified approach to the analysis of single and interconnected fuzzy systems Fuzzy Control Estimation and Fault Detection is a guide for final year undergraduate and graduate students of electrical and mechanical engineering computer science and information technology and will also be instructive for professionals in the information technology sector *Proceedings of the ASME Dynamic Systems and Control Division--2003* ,2003 **Journal of Dynamic Systems, Measurement, and Control** ,2001 Publishes theoretical and applied original papers in dynamic systems Theoretical papers present new theoretical developments and knowledge for controls of dynamical systems together with clear engineering motivation for the new theory Applied papers include modeling simulation and corroboration of theory with emphasis on demonstrated practicality **Proceedings of the ... IEEE International Conference on Control Applications** ,2005 **Estimation and Control in Discrete-time Nonlinear Systems** Yongkyu Song,1992 **Control of Cutting Vibration and Machining Instability** C. Steve Suh,Meng-Kun Liu,2013-08-01 Presents new developments on machine tool vibration control based on discontinuous dynamical systems Machining instability is a topical area and there are a wide range of publications that cover the topic However many of these previous studies have started by assuming that the behavior of the system can be linearised Meanwhile there are many recent advances in the fields of signal processing nonlinear dynamics and nonlinear control all of which are relevant to the machining stability problem This book establishes the fundamentals of cutting mechanics and machine tool dynamics in the simultaneous time frequency domain The new nonlinear control theory developed by the authors that facilitates simultaneous control of vibration amplitude in the time domain and spectral response in the frequency domain provides the foundation for the development of a controller architecture universally viable for the control of dynamic

instability including bifurcation and chaos Once parameters underlying the coupling interaction and evolution of different cutting states and between the tool and workpiece are established they can then be incorporated into the architecture to create a control methodology that mitigate machining instability and enable robust chatter free machine tool design applicable in particular to high speed micro and nano machining Presents new developments on machine tool vibration control based on discontinuous dynamical systems Provides a clear and concise approach to the understanding and control of machine tool and workpiece vibrations from an alternative view contributing to an in depth understanding of cutting dynamics and robust control of machining instability Equips the reader with the knowledge to understand the dynamics of cutting and operation of machine tool systems in different conditions as well as the concept of cutting instability control Includes data examples in MATLAB coding *Proceedings of the ASME Dynamic Systems and Control Division* ,1997
