**Airplane Flying Characteristics in Turbulence** E. D. Onstott,E. P. Salmon,1971 A method for predicting the performance of the total pilot vehicle system has been developed for the lateral dynamics of Class 4 airplanes This method which is based on pilot model theory and multiloop analysis predicts tracking errors for command tracking tasks and also for attitude hold tracking tasks in turbulence The predictions are in terms of root mean square time domain statistics and are obtained by means of a fully automated multiloop analysis performance prediction program available from the United States Air Force Thus system performance can be evaluated analytically in terms of familiar time
