Tidal Dynamics Fergus J. Wood, 2001 Current Trends in Estuarine and Coastal Dynamics Xiao Hua Wang, Lulu Qiao, 2024-08-17 Recent Trends in Estuarine and Coastal Dynamics Observations and Modelling is a thorough reference guide on the most recent trends and developments in observing and modelling of estuaries and coastal oceans The coasts cover a diverse range of ecosystems within marine estuarine and freshwater environments They are some of the most heavily populated and visited areas and are also some of the most threatened natural habitats Human activities like sewage discharge overfishing navigation channel dredging land reclamation the construction of shipping ports and marine plastics are also responsible for coastal pollution and degradation This book focuses on current studies on sediment transport dynamics and hydrodynamics of these environments and presents thorough case studies that aim to help students and researchers working in the field Includes worldwide contributions from experts in the field of ocean modelling and coastal management Contains real life case studies to guide students and researchers Covers the latest studies on recent developments in observing and modelling estuaries and coastal oceans *Tidal Hydrodynamics* Bruce B. Parker, 1991-09-03 Consists of refereed papers by the world's leading authorities on tidal hydrodynamics Its forty four papers including nine review papers cover all aspects of the subject and present for the first time in one place state of the art treatments of recent advances including tidal detection from satellite altimetry global tide modeling nonlinear tidal interactions and internal tidal phenomena **Tidal Dynamics : Coastal Flooding and Cycles of Gravitational Force** Fergus J. Wood, 1986-02-03 Rev expanded ed of The strategic role of perigean spring tides in nautical history and North American coastal flooding 1635 1976 1978 Sediment Cascades Tim Burt, R. J. Allison, 2010-01-07 Sediment Cascades An Integrated Approach provides a comprehensive overview that addresses the transport of sediment through the landscape Suitable for academic researchers industry practitioners research students and advanced level undergraduates seeking detailed knowledge and an up to date review of the recent research literature The emphasis is on contemporary sediment system dynamics with relevance both to landscape management and landform development Sediment Cascades An Integrated Approach begins with an explanation of the need for an integrated approach to sediment delivery systems and introduces the main themes of sediment production delivery storage and transfer Further chapters then focus on specific environments from mountains through floodplains to estuaries and the continental shelf Focuses on contemporary sediment system dynamics and current research Covers a sequence of environments from steep mountains to the continental shelf Highlights the continuity of the subject by linking each component area with its adjacent elements **Salt Intrusion, Tides and Mixing in Multi-Channel Estuaries** Anh Duc Nguyen, 2008-11-01 Multi channel estuaries such as the Mekong Delta in Vietnam and the Scheldt in the Netherlands have characteristics of both the river and the sea forming an environment influenced by tidal movements of the sea and freshwater flow of the river This study discusses a predictive analytical approach for salinity intrusion and discharge estimate

in multi channel estuaries The new approach agrees with 1 D hydrodynamic models and observations indicating its applicability in practice It has successfully developed a new theory and a new equation to quantify tidal pumping due to ebb flood channel residual circulation and the related salt dispersion

Dynamic Response of Coasts and Estuaries to Human Impacts Xiao Hua Wang,2024-07-25

The coasts cover a diverse range of ecosystems within marine estuarine and freshwater environments They are some of the most heavily populated and visited areas and are also some of the most threatened natural habitats Coastal zones are critically important not only to the people who live there but for the health of the planet Many world estuaries and coast environments are under tremendous stress in response to global warming and the increased anthropogenic forcing Warmer waters rising sea levels tropical cyclones storm surges and flooding and coastal erosion are just some of the elements impacting coastal communities worldwide and transforming these environments Coastal hazards such as storm events with associated storm surges are increasing in frequency and intensity as are marine heatwaves that devastate coral reefs Human activities like sewage discharge overfishing navigation channel dredging land reclamation the construction of shipping ports and marine plastics are also responsible for coastal pollution and degradation Therefore a good understanding of the current state of coastal environments and lessons learnt from these human influences is extremely valuable to restore and protect these habitats and ecosystems from further environmental degradation and even catastrophe In this book case studies are used to tell a story about how these environments respond to severe human induced perturbations and what has gone right and wrong from environmental and resource management point of view The readership of the book include high level undergraduate Oceanography students and workers from Coastal Engineering and Management
