,1997 *Sustaining Mobile Learning* Wan Ng, Therese M. Cumming, 2015-07-16 Mobile technologies are one of the fastest growing areas of technology in education. For learners they offer an appealing opportunity to transcend teacher-defined knowledge and approaches by being able to access multiple alternative sources of information anytime and anywhere. While the pace of engagement with and research into the educational applications of mobile technologies has picked up dramatically in the last decade, there is no consolidated view of how to sustain the practices or opportunities that are being explored. Sustainability is a complex but crucial issue in mobile learning as educational institutions are usually required to make substantial investments in mobile devices and associated technologies, time, and training to initiate mobile learning programs. The complexity of sustainable mobile learning programs is further exacerbated by the fast pace of change of digital technologies where, with every change, new possibilities are opened up and investments required. In addition, educators are still attempting to reconcile institutions of formal education with informal mobile learning. The book addresses these issues with a particular focus on exploring the challenges surrounding the sustainability of mobile learning in K-12 and higher education, investigating the importance of sustaining mobile learning for diverse populations of students globally, discussing theoretical models for the sustainability of mobile learning, providing the reader with strategies for sustaining mobile learning. Presenting new research alongside theoretical models and ideas for practice, the book will appeal to researchers, academics, and postgraduate students in the fields of education and mobile learning, as well as those working in teacher education.

Case Studies of Reform in Mathematics Education Through the Development of Technology-using Teacher Leaders Shannon Marie Guerrero, 2005

Designing and Implementing Interdisciplinary Education Zehui Zhan, Siyuan Lyu, Shijing Niu, Kai Tu, Qingna Lai, 2025-02-11 Interdisciplinary education is the future trend in global K-12 curriculum reform, and all K-12 subject teachers should be prepared to meet the challenges it presents. This book aims to explore the competence structure that K-12 teachers need to effectively design and implement interdisciplinary education from a general perspective of subject integration. Drawing on relevant theories from interdisciplinary education and teacher competence research, the book clarifies the fundamental connotations of teachers' interdisciplinary teaching competence and identifies the key elements of this competence from an international perspective. It also examines the transformation pathways for teachers from subject-specific teaching to interdisciplinary teaching based on China's national curriculum framework. On this basis, the book constructs a framework for K-12 teachers' interdisciplinary teaching competence and applies it to the cultivation of interdisciplinary teaching staff, guiding the design of assessment tools, improvement strategies, and training programs for enhancing interdisciplinary teaching competence. The book will encourage teachers from different disciplines to participate in the design and implementation of interdisciplinary teaching, thereby promoting the sustainable development of interdisciplinary education. Global educators and researchers interested in interdisciplinary education, competence framework development, teacher professional development, and Chinese education will find valuable insights in this book.

Science Teaching/science Learning Elnora S. Harcombe,2001-01-01 Science Teaching Science Learning based on a model professional development program gives powerful proof that urban teachers can ignite curiosity and promote deep understanding in children when provided with the necessary intellectual infrastructure including a complex balance of increased science knowledge a safe environment for professional experimentation and a long term interaction with colleagues The ensuing invigoration and renewed dedication of program participants belies the inevitability of the projected national science teacher shortage Harcombe breaks new ground demonstrating that when professional teacher development is based on constructivist learning theory and framed in the knowledge domain of the sciences it empowers teachers to dramatically change what they know how they teach and what their students learn **The Sind University Journal of Education** University of Sind. Influences on Evolving Professional Practice as Perceived by Music Teachers Walter H. Rich, 2004 **New Trends in Primary School Science Education** Wynne Harlen, 1983 **Inquire Within** Douglas Llewellyn, 2002 Addressing students' misconceptions is a critical part of science teaching. But how does one uncover and teach to these misconceptions? A good place to start is *Inquire Within*, which presents many valuable strategies for meeting this challenge. National Science Teachers Association, Washington. The author teaches a method of learning in science that is inquiry-based and that involves a process of asking questions, exploring, and making the connections that lead to understanding and discovery. As students involve themselves in the process of inquiry, they learn how to ask the kind of questions that determine the answers they need to help solve their scientific problems. The reader is given simple step-by-step lessons on how to apply this method of learning to easy scientific experiments, and then the author shows how to evaluate the student's progress with monitoring charts, rubrics, and other assessment tools. By using this method of inquiry, students hone their decision-making skills and find empowerment in applying these skills to become better students.

Development of Science Teachers' TPACK Ying-Shao Hsu, 2015-05-18 Science is a subject matter that requires learners to explore the world and develop their own abilities on the basis of that exploration. As technology broadens and deepens, science teachers need to expand their Technological Pedagogical Content Knowledge (TPACK), which determines how well they use technology to help students learn science. The book details our efforts to prepare science teachers to teach with the help of technology, examining various aspects of teacher education, professional development, and teaching material preparation. It consists of three parts which focus on how TPACK is conceptually constructed within the field of science education, how teacher evaluation and teaching materials are developed and utilized based on the transformative model, and how science teachers are prepared and supported with electronic resources based on the integrative model. The book offers a valuable resource for all those working in science education, as well as those readers who are interested in teacher education. Science teachers will come to know how simulations and animations can pedagogically support student learning. Practices for teachers' TPACK development, such as learning by design, evaluation, and measurement, and teacher communities are also addressed, applied, and discussed in the case of science teachers. The individual chapters will provide teacher educators and researchers from all disciplines with new insights into preparing teachers for the Digital Era.
