**Brendan G. Carr**

## **Unstable Ideas:**

**Unstable Ideas** Jerome Kagan, 1989 Discusses temperament cognitive development and consciousness and suggests new research techniques for studying child development

**Risk Factors for Psychosis** Andrew Thompson, Matthew Broome, 2020-02-22 Risk Factors for Psychosis Paradigms Mechanisms and Prevention combines the related but disparate research endeavors into a single text that considers all risk factors for psychosis including biological psychological and environmental factors The book also introduces the ethics and current treatment evidence that attempts to ameliorate risk or reduce the number of individuals with risk factors developing a psychotic disorder Finally the book highlights new research paradigms that will further enhance the field in the future Psychotic disorders affect more than 50 million people worldwide creating a devastating effect on lives and causing major financial and emotional impact on families and on society as a whole The search for risk factors for psychosis has developed rapidly over the past decades invigorated by changes in the thinking about the malleability and treatability of psychotic disorders The paradigms for investigating psychosis risk have developed often in parallel but there has been no book to date that has summarized and synthesized the current approaches Integrates research from biological psychological and environmental factors into a single resource Offers insight into at risk paradigms biomarkers and the current state of research on treatment option for psychosis Presents a holistic and dynamic look at risk syndromes and how they can be measured through neuroimaging neuropsychology and other methods **306090 04:**

**Global Trajectories** Alexander F. Briseño, Jonathan D. Solomon, 2003-05 306090 04 Global Trajectories examines emerging pedagogies in design technology and ecology cultivating and critically addressing the diverse yet intersecting threads of research being pursued by an emerging group of young architects from around the world including Eye Design Linda Samuels Cameron Sinclair Peter Perisic and others as well as commentary from Saskia Sassen Michael Hardt Reinhold Martin David Hays Nicholas de Monchaux Stephano Boeri Keller Easterling and Neil Leach

**Global Brain** Howard Bloom, 2008-04-21 As someone who has spent forty years in psychology with a long standing interest in evolution I ll just assimilate Howard Bloom s accomplishment and my amazement DAVID SMILLIE Visiting Professor of Zoology Duke University In this extraordinary follow up to the critically acclaimed The Lucifer Principle Howard Bloom one of today s preeminent thinkers offers us a bold rewrite of the evolutionary saga He shows how plants and animals including humans have evolved together as components of a worldwide learning machine He describes the network of life on Earth as one that is in fact a complex adaptive system a global brain in which each of us plays a sometimes conscious sometimes unknowing role and he reveals that the World Wide Web is just the latest step in the development of this brain These are theories as important as they are radical Informed by twenty years of interdisciplinary research Bloom takes us on a spellbinding journey back to the big bang to let us see how its fires forged primordial sociality As he brings us back via surprising routes we see how our earliest bacterial ancestors built multitrillion member research and development teams a full 3 5 billion years ago

We watch him unravel the previously unrecognized strands of interconnectedness woven by crowds of trilobites hunting packs of dinosaurs feathered flying lizards gathered in flocks troops of baboons making communal decisions and adventurous tribes of protohumans spreading across continents but still linked by primitive forms of information networking We soon find ourselves reconsidering our place in the world Along the way Bloom offers us exhilarating insights into the strange tricks of body and mind that have organized a variety of life forms spiny lobsters which during the Paleozoic age participated in communal marching rituals and bees which during the age of dinosaurs conducted collective brainwork This fascinating tour continues on to the sometimes brutal subculture wars that have spurred the growth of human civilization since the Stone Age Bloom shows us how culture shapes our infant brains immersing us in a matrix of truth and mass delusion that we think of as reality Global Brain is more than just a brilliantly original contribution to the ongoing debate on the inner workings of evolution It is a grand vision says the eminent evolutionary biologist David Sloan Wilson a work that transforms our very view of who we are and why

*Early Detection and Intervention in Psychosis A.*, Riecher-Rössler, P.D., McGorry, 2016-01-08 This new volume reviews early detection approaches and possible subsequent interventions for psychosis After introductory chapters various methods for early detection not only in adults but also adolescents are described In this context the validity of the psychosis high risk state is debated along with whether early detection is indeed helpful or actually stigmatizing for the patient Further contributions review neuroimaging including structural and functional MRI as well as pattern recognition methods and measurement of connectivity abnormalities Neurocognitive and neurophysiological assessments are also discussed in detail The last part focuses on early intervention for emerging psychosis including psychological methods non pharmacological substances and pharmacological treatments Overall conclusions and future perspectives are provided in a final chapter This book is a state of the art review of current options It is important reading for researchers and clinicians faced with recognizing and treating psychosis in the most timely and effective manner possible

**Queer Youth Histories** Daniel Marshall, 2022-01-01 This pioneering collection provides for the first time an international and transdisciplinary reflection on youth history and queer sexualities and genders Since the 1970s there has been an explosion in research focusing on LGBTQ history and on the lives of LGBTQ young people but these two research areas have seldom been brought together explicitly Bridging LGBTQ historical scholarship and contemporary queer youth cultural studies this book marks out pathways for thinking more about youth in LGBTQ history and more about history in contemporary understandings of LGBTQ youth Examining histories from the nineteenth century through to the recent past contributors examine queer youth histories in continental Europe Britain the United States of America New Zealand Australia Canada Ireland India Malaysia and Hong Kong

**Advertising and Selling**, 1914 **The Psychology of the Boy** Frederic Archibald Servanté, 1924 *Progress in Mathematical Biology Research* James Terrence Kelly, 2008 Applying mathematics to biology has a long history but only recently has there been an explosion of interest in the field Some reasons for this include the explosion of data rich

information sets due to the genomics revolution which are difficult to understand without the use of analytical tools recent development of mathematical tools such as chaos theory to help understand complex non linear mechanisms in biology an increase in computing power which enables calculations and simulations to be performed that were not previously possible and an increasing interest in in silico experimentation due to the complications involved in human and animal research This new book presents the latest leading edge research in the field
