The Skeptic Encyclopedia of Pseudoscience Michael Shermer, 2002-11-14 A thorough objective and balanced analysis of the most prominent controversies made in the name of science from the effectiveness of proposed medical treatments to the reality of supernatural claims. Edited by Michael Shermer, editor and publisher of *The Skeptic* magazine, this truly unique work provides a comprehensive introduction to the most prominent pseudoscientific claims made in the name of science. Covering the popular, the academic, and the bizarre, the encyclopedia includes everything from alien abductions to the Bermuda Triangle, crop circles, Feng Shui, and near-death experiences. Fifty-nine brief descriptive summaries and 23 investigations from *The Skeptic* magazine give skeptical analyses of subjects as far ranging as acupuncture, chiropractic, and Atlantis. The encyclopedia also gives for and against debates on topics such as evolutionary psychology and case studies on topics like police psychics and the medical intuitive Carolyn Myss. Finally, the volumes include five classic works in the history of science and pseudoscience, including the speech William Jennings Bryan never delivered in the Scopes trial and the first scientific and skeptical investigation of a paranormal spiritual phenomenon by Benjamin Franklin and Antoine Lavoisier.

The Fourth Source Robert J. Tuttle, 2012 This book describes how the effects of nature's own nuclear reactors have shaped the Earth, the Solar System, the Universe, and the history of life as we know it. It focuses on observed effects that are poorly explained by our standard theories, identifies certain errors in those theories, and shows how these effects are caused by natural nuclear fission reactors. The theory of Plate Tectonics is wrong, and it is shown that expansion of the Earth causes continental drift. A physically reasonable mechanism is proposed for expansion, and observational data are presented to show that this occurs. Evolution is explained as punctuated equilibrium with mutations caused by abrupt surges of radiation, and related life forms that have been interpreted as separate species are actually the result of radiation injury. This view is particularly effective as applied to humans. The ability of the dinosaurs to live so large is explained by use of Earth Expansion and a more massive atmosphere to provide buoyancy and effective transpiration of oxygen. These effects also explain how pterodactyls and ancient birds could fly. Expansion induced by impacts at the end of the Cretaceous caused the atmosphere to thin and the dinosaurs collapsed. Analysis of geological and biological data supports this. The astronomical distance scale is shown to be wrong based on the misconception that trigonometric parallax is an absolute measurement. It isn't, and the method is led astray by the overwhelming number of asteroidal fragments masquerading as stars. The measurements of an expanding Universe are shown to be in error, and an expanding Universe is

not needed by an alternative interpretation of Einstein's equations. This interpretation is based on the equal creation of matter and antimatter which is known to occur. Spiral galaxies are not vast Island Universes of stars as we have thought but are shown to be the strewn fields of debris from the nuclear fission detonation of distant planets. The Universe is not made up of 96% Dark Matter and Dark Energy but is instead very ordinary. Abundant evidence and references provide support for all these interpretations. This book opens new opportunities for research by correcting several fundamental errors in our concepts of the Earth, Life and the Universe.

Archaeo-Astronomia Dean Clarke, 2008-10-23. There have been many books on the origin of astronomy, some good and some very poorly address the issues of ancient man's interests in the stars. The ancient Sumer and Egyptian notions of music mostly confirm how ancient this notion is in their chorded progressions of tone. This notion is more an Upper Paleolithic celestial idea. In a sense, man during this time was beginning to have a concept of north, south, east and west in spatial terms. It involves the curvature of the ribs of Nut, the Egyptian Sky Goddess, as a ribbed vaulted sky and sometimes in a horizon sense of a bowing arch of a star's path or the curve of a bone in the star's moving path. The half-way point of this fall, for say our Nut, Adam and Eve would thus be about 27,000 BC, which falls in a significant period: Ice Age re-emergence and a desert expanding in equatorial regions. These are only a small part of what had to be addressed in origins of night sky studies. The point being, this piece, as fake or not, is that the components of the animals, man, plants and man's artifacts were very early on displayed. We might ask, in such a condition, what was their night sky? If we look at all of these constellations, they fall below the Celestial Equator in the South Pole region, mostly. It would seem that all these birds, to them being placed in the night sky like the stars, and as they watched what directions the birds along with stars, as to where they went, in order to ascertain their relations to dusk or dawn, night sky. What caused the South Africa plight of 80,000 BC? The Antarctica had been growing ice forms from 170,000 BC to 80,000 BC, towards the north, and then around 70,000 BC, there seemed to be a melting trend back south. In an astronomy sense, we can thank him for larger game entering in the pantheon of the constellations or the leaf otter and some constellations lost to time like the mammoths. What does this have to do with constellations, taboos or the advent of Cro-Magnon man, well, in the depictions of constellation images. Slowly from east to west, the stars move, but then it did not take man, not long after 70,000 BC, to note that some planets or stars seemed to move retrograde in the night sky. This book addresses what ideas did they show or have before or after these earth changes. As ideas such as, Maybe it was a lasso constellation for some animals capture as a God of Capture. And Somewhere around the time of

50 000 BC in the region of northern England to the region above the Black Sea there occurred a melting phase between the ice ages and cultures began to spread The evidence of this is found by different locations in Europe and Central Europe of the use of rock shadows stars noted by hands in movement and certain hand symbols by star images or dots as stars not just stab marks Ironical again that Man beside Woman on the pole treetop does not have strong reminders of the Adam Eve Tree and the Serpent as maybe Draco The symbol anciently always shows the snake at the foot of the tree or ascended the tree at the apex of the trunk which if astronomy wise would mean an ascended constellation to the Zenith or the Pole Draco thus deposed Adam and Eve from their own constellation garden and domain by it ascending as an ancient Pole Axis Mundi Thus the smoke screen really is a tied between this local area of France and Late Paleolithic Mans ideas of that region in the night sky of a certain year or month period of hunting Although we have jumped forward in the time of ancient astronomy beginnings in a way really in this sense we have not To the real beginnings of little known ancient astronomy
