The Application of Mathematical Statistics to Chemical Analysis V. V. Nalimov,2014-05-09 The Application of Mathematical Statistics to Chemical Analysis presents the methods of mathematical statistics as applied to problems connected with chemical analysis This book is divided into nine chapters that particularly consider the principal theorems of mathematical statistics that are explained with examples taken from researchers associated with chemical analysis in laboratory work This text deals first with the problems of mathematical statistics as a means to summarize information in chemical analysis The next chapters examine the classification of errors random variables and their characteristics and the normal distribution in mathematical statistics These topics are followed by surveys of the application of Poisson s and binomial distribution in radiochemical analysis the estimation of chemical analytic results and the principles and application of determination of experimental variance The last chapters explore the determination of statistical parameters of linear relations and some working methods associated with the statistical design of an experiment This book will be of great value to analytical chemists and mathematical statisticians

Planning and Analysis of Observational Studies William G. Cochran,2009-09-25 Treats studies primarily in human populations that show casual effects of certain agents procedures treatment or programs Deals with the difficulties that comparative observational studies have because of bias in their design and analysis Systematically considers the many sources of bias and discusses how care in matching or adjustment of results can reduce the effects of bias in these investigations
