The Design Process in Information System Research Marsilius Graf Von Ingelheim, 2009-05 Bachelor Thesis from the year 2009 in the subject Computer Science Commercial Information Technology grade 1 3 University of Frankfurt Main Institute of Information Systems language English abstract The Information Systems IS research discipline is undergoing a serious identity crisis seeking its sphere of activity to be relevant in practice and rigorous in scientific considerations One reason for this is the strengthening of the Design Science approach This new discipline developed as a synergy from aspects of engineering architecture and industrial design and is employed in the design of IT artifacts and software systems Design Science is becoming a powerful trend in IS research Vahidov 2006 It gives the IS discipline a new and more detailed focal point as pertains to the application of software and IT artifact development which is growing in importance in IS research over the time Weber 2003 Orlikowski and Iacono 2001 Cross 2001 IS practitioners ask for new and innovative design approaches dealing with the evolving organizational and inter organizational tasks The way these tasks are executed in close cooperation with the practical business world seems to be insufficiently considered The debate in IS research is carried out between traditional scientists and the knowledge producing researchers practitioners and it could be argued that research aimed at developing IT systems at improving IT practice has been more successful and important than traditional scientific attempts to understand it March and Smith 1995 p 252 IS researchers are mainly focused on the behavioral impact of new IT solutions within a business unit These concepts are needed to describe the relationship between the humans and the technology However this way of conducting research is descriptive and evaluative Instead of telling what is or what will be Design Science is giving guidance as to how to do things Walls et al 1992 The importance *The Design Process in Information System Research* Marsilius Graf von Ingelheim, 2009-04-21 Bachelor Thesis from the year 2009 in the subject Computer Science Commercial Information Technology grade 1 3 University of Frankfurt Main Institute of Information Systems language English abstract The Information Systems IS research discipline is undergoing a serious identity crisis seeking its sphere of activity to be relevant in practice and rigorous in scientific considerations One reason for this is the strengthening of the Design Science approach This new discipline developed as a synergy from aspects of engineering architecture and industrial design and is employed in the design of IT artifacts and software systems Design Science is becoming a powerful trend in IS research Vahidov 2006 It gives the IS discipline a new and more detailed focal point as pertains to the application of software and IT artifact development which is growing in importance in IS research over the time Weber 2003 Orlikowski and Iacono 2001 Cross 2001 IS practitioners ask for new and innovative design approaches dealing with the evolving organizational and inter organizational tasks The way these tasks are executed in close cooperation with the practical business world seems to be insufficiently considered The debate in IS research is carried out between traditional scientists and the knowledge producing researchers practitioners and it could be argued that research aimed at

developing IT systems at improving IT practice has been more successful and important than traditional scientific attempts to understand it March and Smith 1995 p 252 IS researchers are mainly focused on the behavioral impact of new IT solutions within a business unit These concepts are needed to describe the relationship between the humans and the technology However this way of conducting research is descriptive and evaluative Instead of telling what is or what will be Design Science is giving guidance as to how to do things Walls et al 1992 The importance of this new approach is given through the rapid development of business needs and the increased necessity to solve business problems through the implementation of IT solutions The knowledge base for designing new solutions has not yet been fully developed IT consultants borrow knowledge from reference disciplines and apply this knowledge to present problems This way of providing solutions is not compatible with Design Science as an area of research A relevant design approach needs to give new answers to phenomena thus far unsolved However the IS discipline has not yet established a solid groundwork for Design Science within its discipline

Crafting Efficiency in Managerial Costing System Design Pieter W. Buys, 2024-03-25 This book focuses on an integrated approach in developing a model to guide the design of effective managerial costing systems While the focus is on the manufacturing industry information in the book will be useful to other industries as well To achieve this the book utilizes the action design research methodology founded within a design science paradigm which aims to develop pragmatic solutions to an actually experienced business problem or class of business problems After which the book then explains the elaborated action design research process which is a researcher practitioner approach to designing pragmatic industry experienced problems in an academically sound manner In doing so the book illustrates how a design process embedded in the engineering field i e design science research can successfully engineer effective managerial costing systems The book thus includes both academic researchers and industry practitioners applying the contextual iterative solution development activities i e i problem formulation and refinement ii the solution design and iii verification and validation of the proposed solution The final proposed solution presented in the book is presented in a process model format including systematic process flow illustrations and developmental guides which are all supportive in enabling the design of effective managerial costing systems

Non-Functional Requirements in Software Engineering Lawrence Chung, Brian A. Nixon, Eric Yu, John Mylopoulos, 2012-12-06 Non Functional Requirements in Software Engineering presents a systematic and pragmatic approach to building quality into software systems Systems must exhibit software quality attributes such as accuracy performance security and modifiability However such non functional requirements NFRs are difficult to address in many projects even though there are many techniques to meet functional requirements in order to provide desired functionality This is particularly true since the NFRs for each system typically interact with each other have a broad impact on the system and may be subjective To enable developers to systematically deal with a system s diverse NFRs this book presents the NFR Framework Structured graphical facilities are offered for stating NFRs and managing them by refining and inter relating NFRs justifying decisions and determining their impact Since NFRs might not be absolutely achieved they may simply be satisfied sufficiently satisfied To reflect this NFRs are represented as softgoals whose interdependencies such as tradeoffs and synergy are captured in graphs The impact of decisions is qualitatively propagated through the graph to determine how well a chosen target system satisfies its NFRs Throughout development developers direct the process using their expertise while being aided by catalogues of knowledge about NFRs development techniques and tradeoffs which can all be explored reused and customized Non Functional Requirements in Software Engineering demonstrates the applicability of the NFR Framework to a variety of NFRs domains system characteristics and application areas This will help readers apply the Framework to NFRs and domains of particular interest to them Detailed treatments of particular NFRs accuracy security and performance requirements along with treatments of NFRs for information systems are presented as specializations of the NFR Framework Case studies of NFRs for a variety of information systems include credit card and administrative systems The use of the Framework for particular application areas is illustrated for software architecture as well as enterprise modelling Feedback from domain experts in industry and government provides an initial evaluation of the Framework and some case studies Drawing on research results from several theses and refereed papers this book s presentation terminology and graphical notation have been integrated and illustrated with many figures Non Functional Requirements in Software Engineering is an excellent resource for software engineering practitioners researchers and students

Design Science in Information Systems Alan Hevner, Samir Chatterjee, 2010-06-14 It is 5 years since the publication of the seminal paper on Design Science in Information Systems Research by Hevner March Park and Ram in MIS Quarterly and the initiation of the Information Technology and Systems department of the Communications of AIS These events in 2004 are markers in the move of design science to the forefront of information systems research A sufficient interval has elapsed since then to allow assessment of from where the field has come and where it should go Design science research and behavioral science research started as dual tracks when IS was a young field By the 1990s the influx of behavioral scientists started to dominate the number of design scientists and the field moved in that direction By the early 2000s design people were having difficulty publishing in mainline IS journals and in

being tenured in many universities Yes an annual Workshop on Information Technology and Systems WITS was established in 1991 in conjunction with the International Conference on Information Systems ICIS and grew each year But that was the extent of design science recognition Fortunately a revival is underway By 2009 when this foreword was written the fourth DESRIST conference has been held and plans are afoot for the 2010 meeting Design scientists regained respect and recognition in many venues where they previously had little
