**Chiropractic Care Guide** Brent Baldasare, 2014-11-25 We are so happy that your journey to wellness has led you to try chiropractic care As chiropractors our philosophy is simple yet profound As a profession the primary belief is in natural and conservative methods of health care Doctors of chiropractic have a deep respect for the human body's ability to heal itself without the use of surgery or medication We devote careful attention to the biomechanics structure and function of the spine its effects on the musculoskeletal and neurological systems and the role played by the proper function of these systems in the preservation and restoration of health A Doctor of chiropractic is one who is involved in the treatment and prevention of disease as well as the promotion of public health and a wellness approach to patient healthcare My personal journey began as a result of a paralyzing football injury that left me with two choices The first choice was to have spinal surgery and the second was to find an alternative that would relieve the pressure to the nerves that supplied function to my legs On the recommendation of my trainer I tried chiropractic and twenty years to this day I've never had surgery and regained full use of my legs I know I'm truly blessed and I'm not suggesting chiropractic is a cure all for paralysis but I am a walking testament that there is a powerful healing force in the body that if given the proper neurological emotional and nutritional channels can perform miraculous healing Let us share with you a brief introduction to the profession that chose me The world's understanding of the efficacy of chiropractic care is still in its early stages even though knowledge of chiropractic science has been around to some degree as long as recorded time Early chiropractors were jailed and they were publicly mocked by the medical community as charlatans and quacks Until a brave group of doctors took on

Becoming a Chiropractor Christina Cunliffe,2012

Chiropractic Medicine Robert Hartmann McNamara,2018-11-27 From its very beginning chiropractic medicine has faced challenges about the scientific validity of the treatment and the credibility of its practitioners Since those early years many of these criticisms have remained but legislation licensure and litigation have created an environment where chiropractic care is allowed in all 50 states and licenses are required of all chiropractors who wish to practice medicine The implementation of the Affordable Care Act has changed the way insurance companies provide reimbursement for services by medical providers

With a greater emphasis on administratively documenting how and in what ways a particular form of treatment actually improves a patient's health coupled with a greater level of restriction on the types of services medical providers can offer without justification and authorization many medical providers including chiropractors have had to re-examine the services they provide and how they operate. This study attempts to explore the life of chiropractors in light of all the historical and current changes taking place within the medical profession. It also seeks to understand the external and internal threats posed to chiropractors with an eye towards understanding how and in what ways the future of medicine will impact the chiropractic profession. Despite the projected growth of job opportunities for chiropractors between 2014 and 2024 which according to the U.S. Department of Labor is occurring at a much faster than average trajectory than other professions U.S. Department of Labor Statistics 2015 given the costs involved in completing chiropractic training which can exceed 200,000 coupled with the low salary recent data from the U.S. Department of Labor Statistics shows that the median salary for a chiropractor is 64,440 per year along with the challenges of sustaining an individual practice most chiropractors are self-employed in solo practice these obstacles are formidable ones. This is particularly true in light of the recent development of large chiropractic chains such as the Joint that offer spinal and neck adjustments at a fraction of the cost of a traditional provider. This ethnographic study consisted of systematic observation and interviews of 40 chiropractors in South Carolina from Fall 2016 to Fall 2017. Additionally interviews were conducted with staff members patients and other medical providers such as physicians physical therapists massage therapists and representatives from the insurance industry about their understanding and experiences with chiropractic medicine. Phone interviews were also conducted with seven deans and provosts at chiropractic colleges around the country. In total over 100 interviews and informal conversations occurred during the course of the project. All identifiers of participants and chiropractic colleges in the study were removed to ensure anonymity. Instead pseudonyms were created that were known only by the author of the study. Additionally data from the South Carolina Department of Labor Licensing and Regulation was obtained to document changes in the number of chiropractors who are no longer in practice in the state between 2016 and 2017.
