Abstract: Administrative data are crucial to the “big data” revolution of social science and have played an important role in the development of child maltreatment research. These data are also of value to administrators, policy makers, and clinicians. The focus of this paper is the use of administrative data to produce and replicate longitudinal studies of child maltreatment. Child protection administrative data have several advantages. They are often population-based, and allow longitudinal examination of child maltreatment and complex multi-level analyses. They also allow comparison across subgroups and minority groups, remove burden from individuals to disclose traumatic experiences, and can be less-biased than retrospective recall. Finally, they can be linked to data from other agencies to explore comorbidity and outcomes, and are comparatively cost and time effective. The benefits and challenges associated with the use of administrative data for longitudinal child maltreatment research become magnified when these data are used to produce replications. Techniques to address challenges and support future replication efforts include developing a biographical understanding of the systems from which the data are drawn, using multiple data sources to contextualize the data and research results, recognizing and adopting various approaches to replication, and documenting all data coding and manipulation processes. These techniques are illustrated in this paper via a case study of previous replication work.

Keywords: child maltreatment; administrative data; longitudinal; replication

1. Introduction

Administrative data, data collected during the day-to-day operations of an organisation, are crucial to the “big data” revolution of social science [1]. The “... inevitable increase in the use of administrative data in child maltreatment research” was accurately predicted almost two decades ago [2] (p. 308). Since that time, the availability of digital administrative data from statutory child protection agencies has buoyed the literature base, particularly as these data enable researchers to revisit and address old research challenges.

The focus of this paper is on the capacity of administrative data to mitigate the challenge of both producing and, perhaps more importantly, replicating longitudinal studies of child maltreatment. To begin, we provide the theoretical and empirical justification for longitudinal studies of child maltreatment and discuss the strengths and challenges associated with the use of administrative data for these studies. We then extend this discussion to focus on the need for longitudinal replications, and the use of administrative data for these replications. We conclude by highlighting a range of techniques that can be used to address the identified research challenges and make suggestions for future research. To illustrate key arguments, we present our own replication work as a case study.

Studies For Replication In Child Development:

Studies for Replication in Child Development Morris E. Eson, H. Jean Wilkinson, 1975 **Child Development** Laura E. Levine, Joyce Munsch, 2016-12-01 In the Third Edition of the topically organized *Child Development: An Active Learning Approach* authors Laura E. Levine and Joyce A. Munsch invite students to take an active journey toward understanding the latest findings from the field of child development. Using robust pedagogical tools built into the chapter narratives, students are challenged to confront myths and misconceptions, participate in real-world activities with children, and independently utilize video resources and research tools to pursue knowledge and develop critical thinking skills on their own. This new edition covers the latest findings on developmental neuroscience, positive youth development, the role of fathers, and more, with topics of diversity and culture integrated throughout. More than a textbook, this one-of-a-kind resource will continue to serve students as they go on to graduate studies, to work with children and adolescents professionally, and to care for children of their own.

How Children Develop Robert S. Siegler, Judy S. DeLoache, Nancy Eisenberg, 2011 The authors emphasize the fundamental principles and enduring themes underlying children's development and focus on key research. This new edition also contains a new chapter on gender, as well as recent work on conceptual development.

Demetre, 1995 Greenwich Readers is a major new anthology series designed specifically to supplement teaching resources at undergraduate level in the following subject areas: social sciences, humanities, psychology, and law. Drawing together a varied and frequently inaccessible range of essential readings and key texts, this ongoing programme has been carefully selected to provide a detailed overview of individual subjects and forms a framework for specific courses. The overall series has been devised to offer a solution to many of the problems students encounter in accessing set course texts, and it is hoped the anthologies will alleviate both pressure on library resources, as well as ensuring higher levels of course completion. All volumes benefit from introductory essays and appropriate linking passages, and full textual references are included where available.

An Introductory Reader in Developmental Psychology is a compilation of classic and recent studies aimed at the new student. The book comprises empirical and theoretical work on the role of early experience in development, perception and cognition in infancy, attachment in infancy, language acquisition, cognitive development in childhood, social relationships in childhood, and cognitive and social development in adolescence. It is aimed at first and second year undergraduates and includes a statistics primer to assist students who have not taken an introductory course in statistics.
