

# THYROID DISORDERS

## What is the Thyroid?

The thyroid is a small gland that is shaped much like a butterfly (shown) and sits in the throat, just below the larynx. The thyroid gland sits just below the larynx. It makes hormones that regulate the normal function of many organs and tissues. It also stores some of the body's iodine and controls its release.

When the thyroid is not working properly, called thyroid disorders, it can cause:

- Weight gain
- Weight loss
- Fatigue
- Nervousness
- Irritability
- Depression
- Hair loss
- Heat intolerance
- Constipation
- Dry skin
- Enlarged thyroid

## Normal Hormone Production

The thyroid gland is controlled by the pituitary gland. When the level of thyroid hormones (T4) in the blood falls, the pituitary gland releases thyroid-stimulating hormone (TSH) to a gland called the thyroid gland. TSH causes the thyroid gland to make more T4. If T4 is high, the pituitary gland releases less TSH.

## How to Check Your Thyroid

Use these four simple steps to check for thyroid problems. Your doctor will do a physical exam to see if you have a thyroid problem.

1. While holding a mirror, look at the area of your neck just below the Adam's apple. This is where you will find your thyroid.

2. Tilt your head back, while looking at the thyroid area in the mirror.

3. Take a drink of water. Look at your neck and check for any bulge in the area where your thyroid is.

## Overactive Thyroid

Overactive thyroid causes an enlarged thyroid.

- Bulging eyes
- Hyperreflexia (trembling limbs)
- Trembling of hands

## Common Thyroid Disorders

### Overactive Thyroid (Hyperthyroidism)

The most common type of thyroid disorder is when the thyroid makes too much of the thyroid hormone. This condition is called hyperthyroidism.

### Graves' disease

One of the most common causes of overactive thyroid, especially among women, is Graves' disease. The immune system attacks the thyroid gland, causing it to produce too much thyroid hormone. This disease is an autoimmune disease, which means the immune system attacks the body's own tissues.

### Thyroiditis

Thyroiditis is an inflammation of the thyroid gland. It can be caused by an infection or by an autoimmune disease. The condition usually goes away on its own, but it can cause long-term problems if not treated.

## Symptoms

- Unexplained weight loss, even before appetite and food intake have changed
- Rapid or irregular heartbeat or palpitations of the heart
- Heat intolerance
- Sweating
- Changes in menstrual patterns
- Changes in bowel patterns, especially more frequent bowel movements
- Enlarged thyroid gland, which may appear as a swelling in the neck or the neck
- Excessive sweating
- Excessive tremor
- Eye or discomfort in the neck

## Underactive Thyroid

Underactive thyroid causes a shrunken thyroid.

- Swollen neck veins
- Fatigue
- Dry skin

### Underactive Thyroid (Hypothyroidism)

The most common type of thyroid disorder is when the thyroid makes too little of the thyroid hormone.

### Hashimoto's disease

The most common cause of underactive thyroid is Hashimoto's disease. The immune system attacks the thyroid gland, causing it to produce too little thyroid hormone. This disease is an autoimmune disease, which means the immune system attacks the body's own tissues.

### Underactive Thyroid and pregnancy

A fetus depends on their mother's thyroid hormone for normal development. Having pregnancy-related thyroid problems can cause complications for the fetus, so it's important to check the thyroid levels in women who are pregnant or trying to get pregnant.

- Increased sensitivity to cold
- Constipation
- Weight gain and dry skin
- Hoarse voice
- Depression
- Excessive menstrual periods
- Fatigue
- Excessive weight gain
- Hair loss
- Swollen thyroid gland

## Thyroid Nodules and Cancer

- Nodule
- Cancer

Thyroid nodules are abnormal growths of thyroid cells that can be benign or cancerous. Most thyroid nodules are benign and do not cause any problems. They are usually found when a doctor checks the neck of the thyroid or with ultrasound. Not all nodules are cancerous.

Thyroid cancer is found in a small number of people with an underactive thyroid. It is usually found when a doctor checks the neck of the thyroid or with ultrasound. It is usually followed by treatment with radioactive iodine.

- Lumps in the neck or the neck, on either side of the windpipe and below the Adam's apple
- Rapid swelling in the throat
- Hoarseness
- Pain in the throat or neck, sometimes spreading to the ears

Other symptoms may occur, depending on the cause of the thyroid.
