Sciences of Geodesy - I Guochang Xu, 2010-09-09 This series of reference books describes sciences of different eras in and around geodesy with independent chapters. Each chapter covers an individual era and describes the history, theory, objective technology, development, highlights of research, and applications. In addition, problems as well as future directions are discussed. The subjects of this reference book include Absolute and Relative Gravimetry, Adaptively Robust Kalman Filters with Applications in Navigation, Airborne Gravity Field Determination, Analytic Orbit Theory, Deformation and Tectonics, Earth Rotation, Equivalence of GPS Algorithms and its Inference, Marine Geodesy, Satellite Laser Ranging, Superconducting Gravimetry, and Synthetic Aperture Radar Interferometry. These are individual subjects in and around geodesy and are for the first time combined in a unique book which may be used for teaching or for learning basic principles of many subjects related to geodesy. The material is suitable to provide a general overview of geodetic sciences for high-level geodetic researchers, educators, as well as engineers and students. Some of the chapters are written to fill literature blanks of the related areas. Most chapters are written by well-known scientists throughout the world in the related areas. The chapters are ordered by their titles. Summaries of the individual chapters and introductions of their authors and co-authors are as follows: Chapter 1: Absolute and Relative Gravimetry provides an overview of the gravimetric methods to determine most accurately the gravity acceleration at given locations. **Class Action** Rand Quinn, 2020-01-21 A compelling history of school desegregation and activism in San Francisco. The picture of school desegregation in the United States is often painted with broad strokes of generalization and insulated anecdotes. Its true history, however, is remarkably wide-ranging. *Class Action* tells the story of San Francisco's long struggle over school desegregation in the wake of the 1954 U.S. Supreme Court decision *Brown v. Board of Education*. San Francisco's story provides a critical chapter in the history of American school discrimination and the complicated racial politics that emerged. It was among the first large cities outside the South to face court-ordered desegregation following the *Brown* rulings, and it experienced the same demographic shifts that transformed other cities throughout the urban West. Rand Quinn argues that the district's student assignment policies, including busing and other desegregative mechanisms, began as a remedy for state discrimination but transformed into a tool intended to create diversity. Drawing on extensive archival research from court docket files to school district records, Quinn describes how this transformation was facilitated by the rise of school choice, persistent demand for neighborhood schools, evolving social and legal landscapes, and local community advocacy and activism. *Class Action* is the first book to present a comprehensive political history of post-*Brown* school desegregation in San Francisco. Quinn illuminates the evolving relationship between

jurisprudence and community based activism and brings a deeper understanding to the multiracial politics of urban education reform He responds to recent calls by scholars to address the connections between ideas and policy change and ultimately provides a fascinating look at race and educational opportunity school choice and neighborhood schools in the aftermath of Brown v Board of Education
